

Tschüss, Spotify und co!

**Ein Talk über Self-Hosted Musik-Streaming,
und allem Sonstigen, was dazu gehört. :3**

Nik, GPN23

Artwork: @yellowk9.bsky.social

Inhalt

- Streaming, von unter'm Schreibtisch aus
 - Server
 - Clients
 - Caveats
- Wo Musik?
- Tagging und Organisation
 - automatisiert
 - nicht ganz so automatisiert

Wer bin i?

- i bin der nik und i bin auch dabei
- manchmal auf Bühnen
- Fedi: [@NikTheDusky@chaos.social](https://chaos.social/@NikTheDusky)

warum?

- Spotify ist doof geworden.
- Andere Streaming-Dienste sind ebenfalls doof geworden.

Die Lösung?

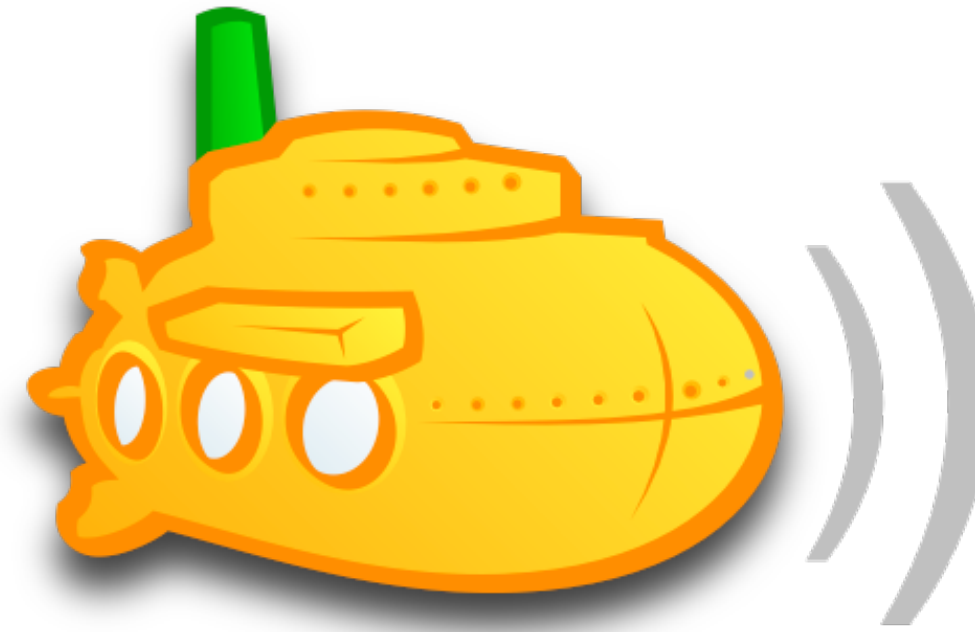

Navidrome

Geschichte

Subsonic

(oder, Subsonics API)

- proprietär
 - moment, nee, eigentlich nicht
 - oder auch doch
- wird seit 2019 nicht mehr weiter entwickelt
- API Spec für Clients offen
- Alternativen: **plex**  **Jellyfin**

... aber warum?

- Musik soll auf n Geräten verfügbar sein
 - am besten auf jeder Kartoffel
- ... könnte eins natürlich auch mit Dateien synchronisieren und ggf. on demand / alles transcoden, aber das fällt mit großen Libraries auseinander
- Bibliothek mit netten Wesen teilen :3
- Musik (oder auch: Medien generell) *besitzen* ist schon ziemlich cool

Was brauchen wir? 🧑🍳🪄

- computer :3
- Zugriffsmöglichkeit auf diesen Rechner
- Webbrowser oder Client

Supersonic (Desktop)

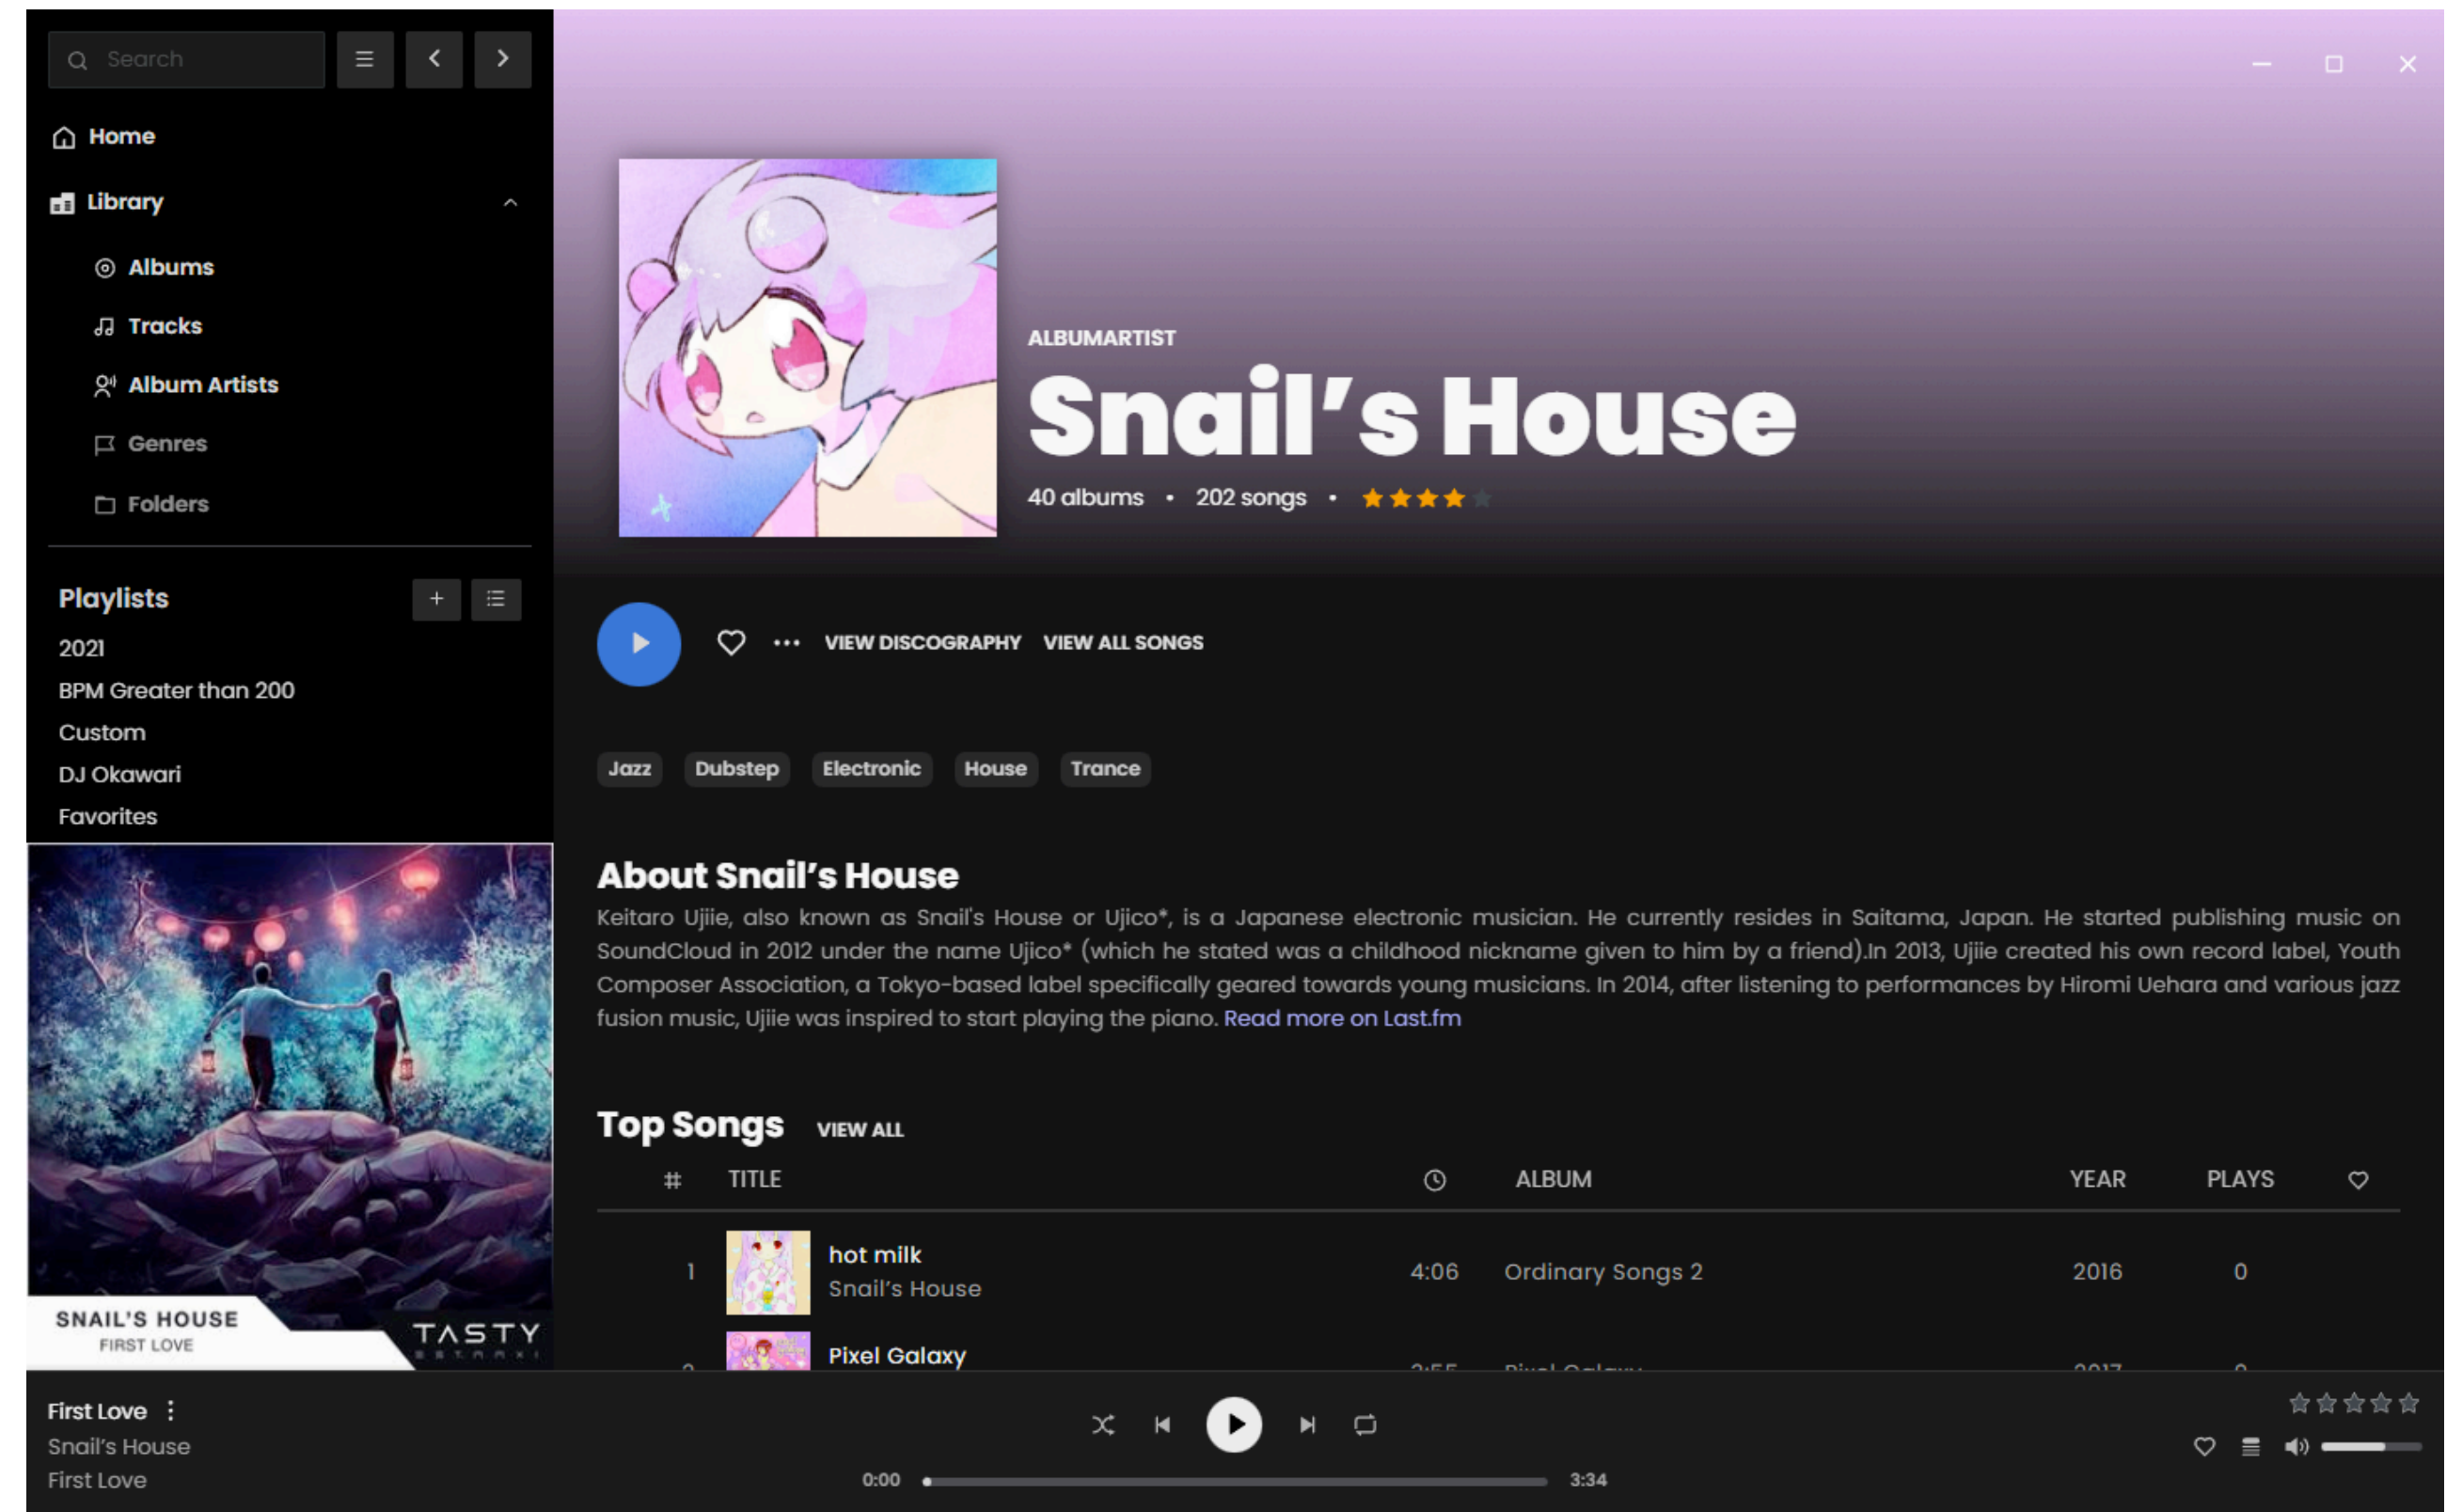

- in Go geschrieben
- gibts seit 3 Jahren
- wird ziemlich aktiv entwickelt
- Multi Server Support
 - nicht combined, aber independent
- open source!! :3

Feishin

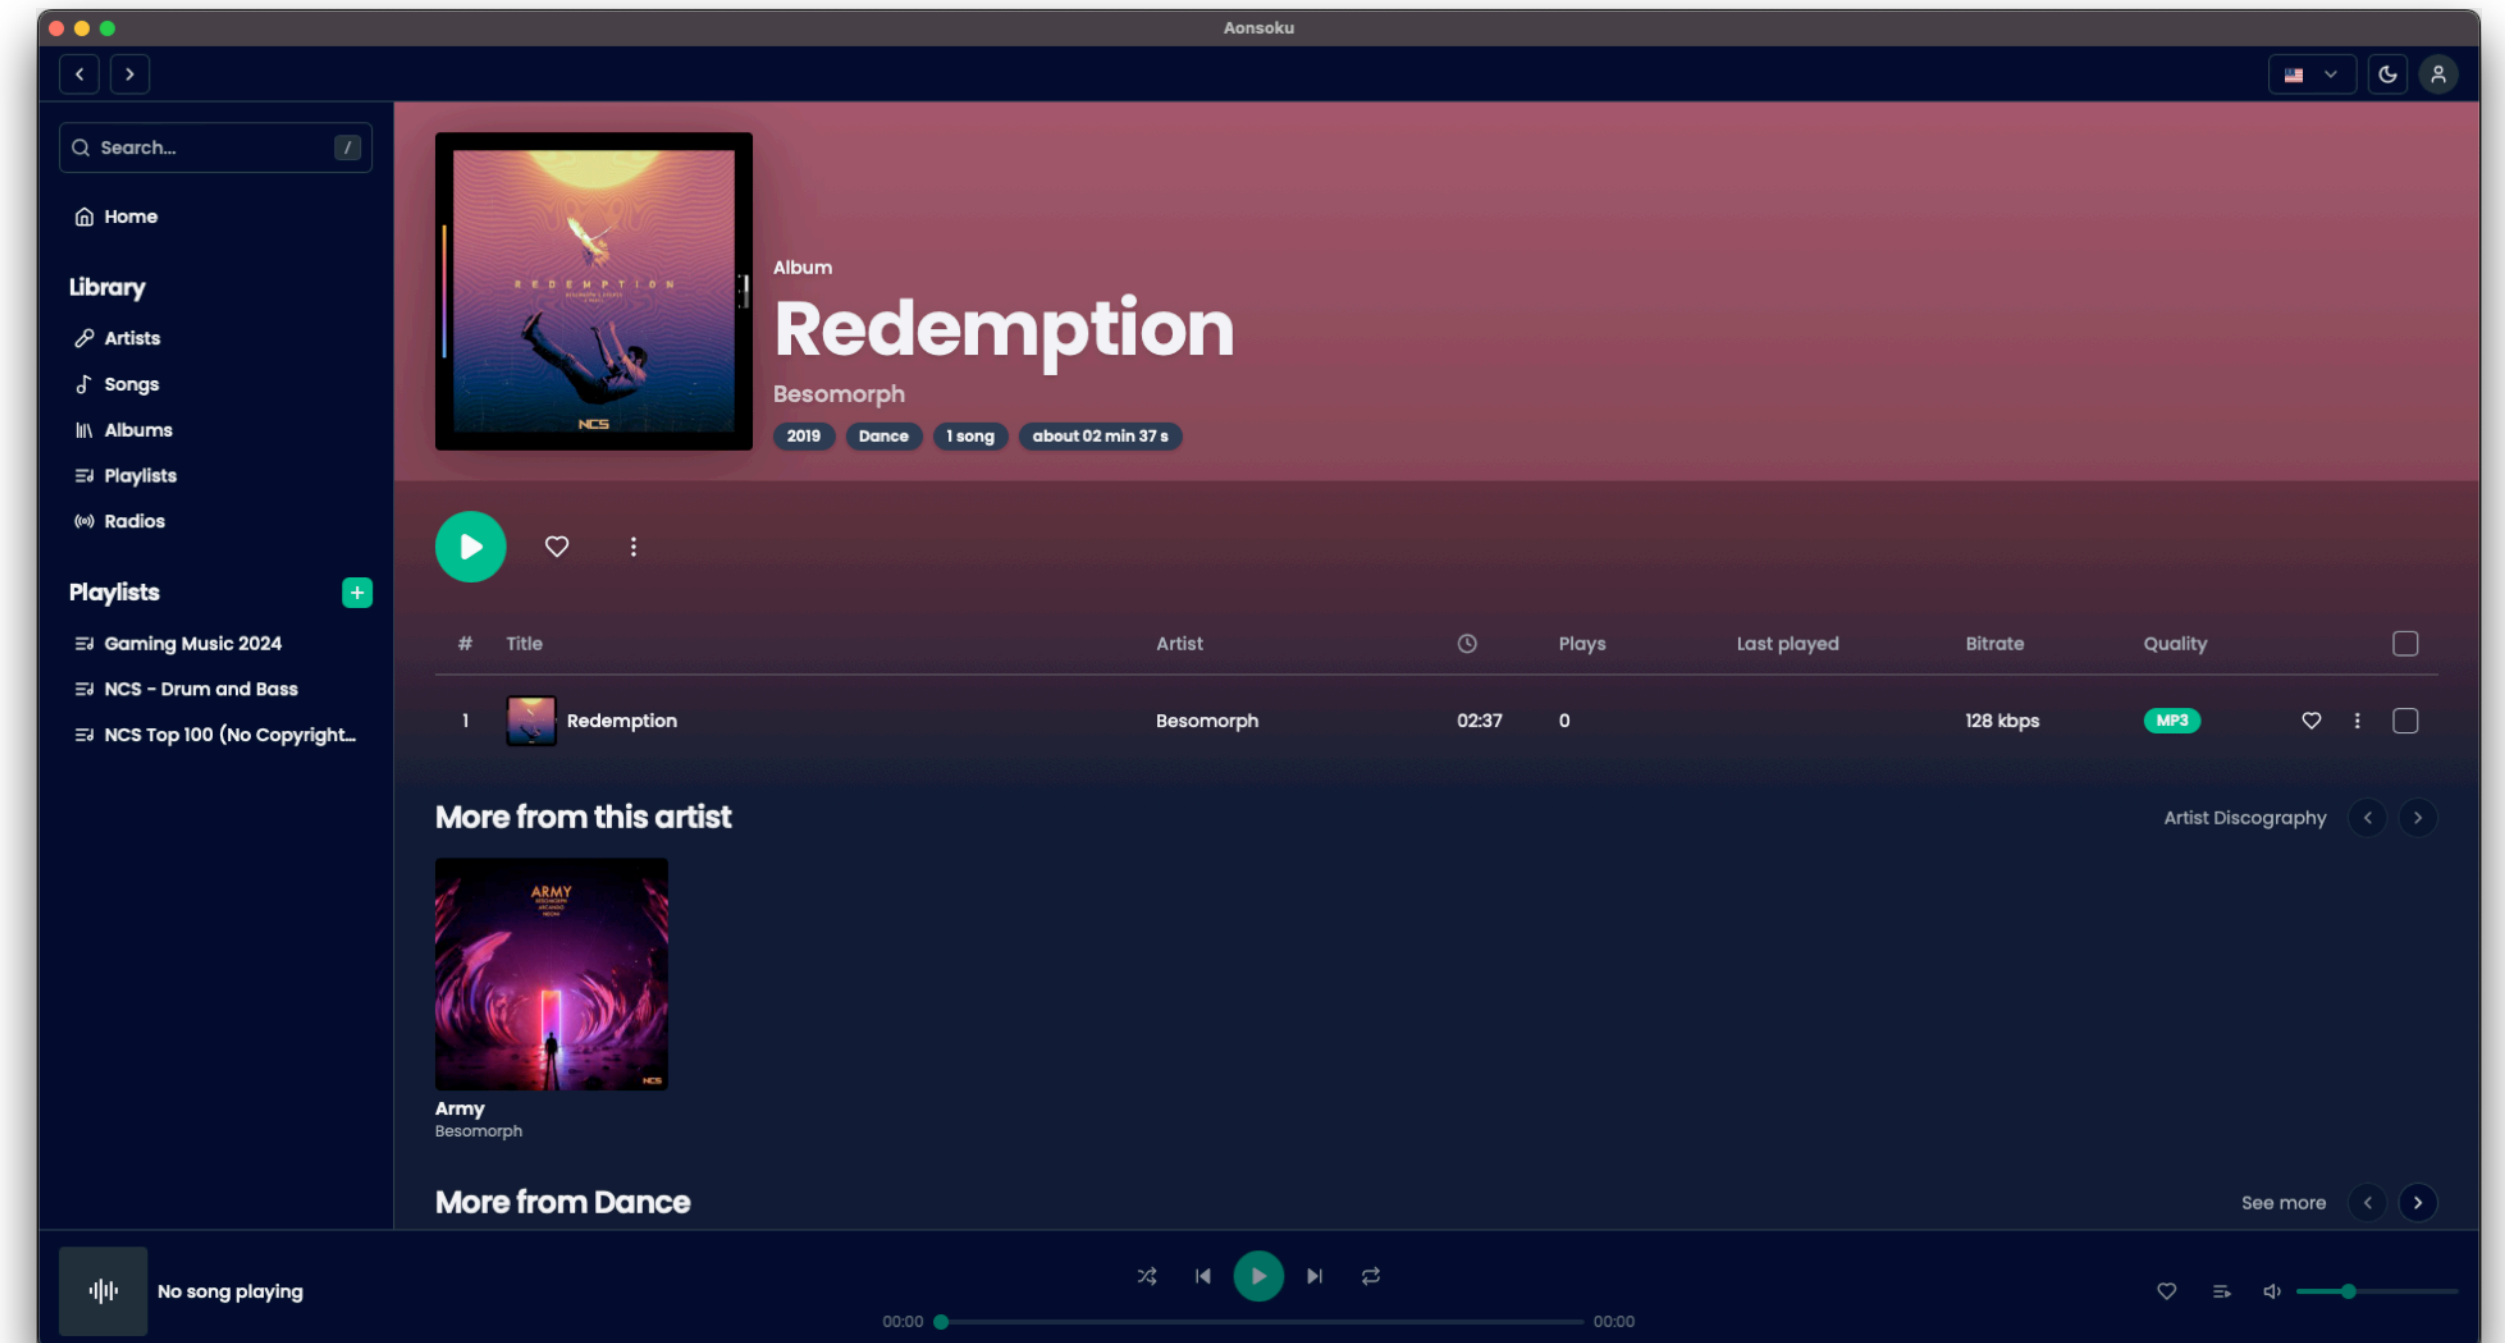

- open source! :3
- multi-server, aber independent
- hat eine Remote-API mit simplem Web-Interface

Aonsoku

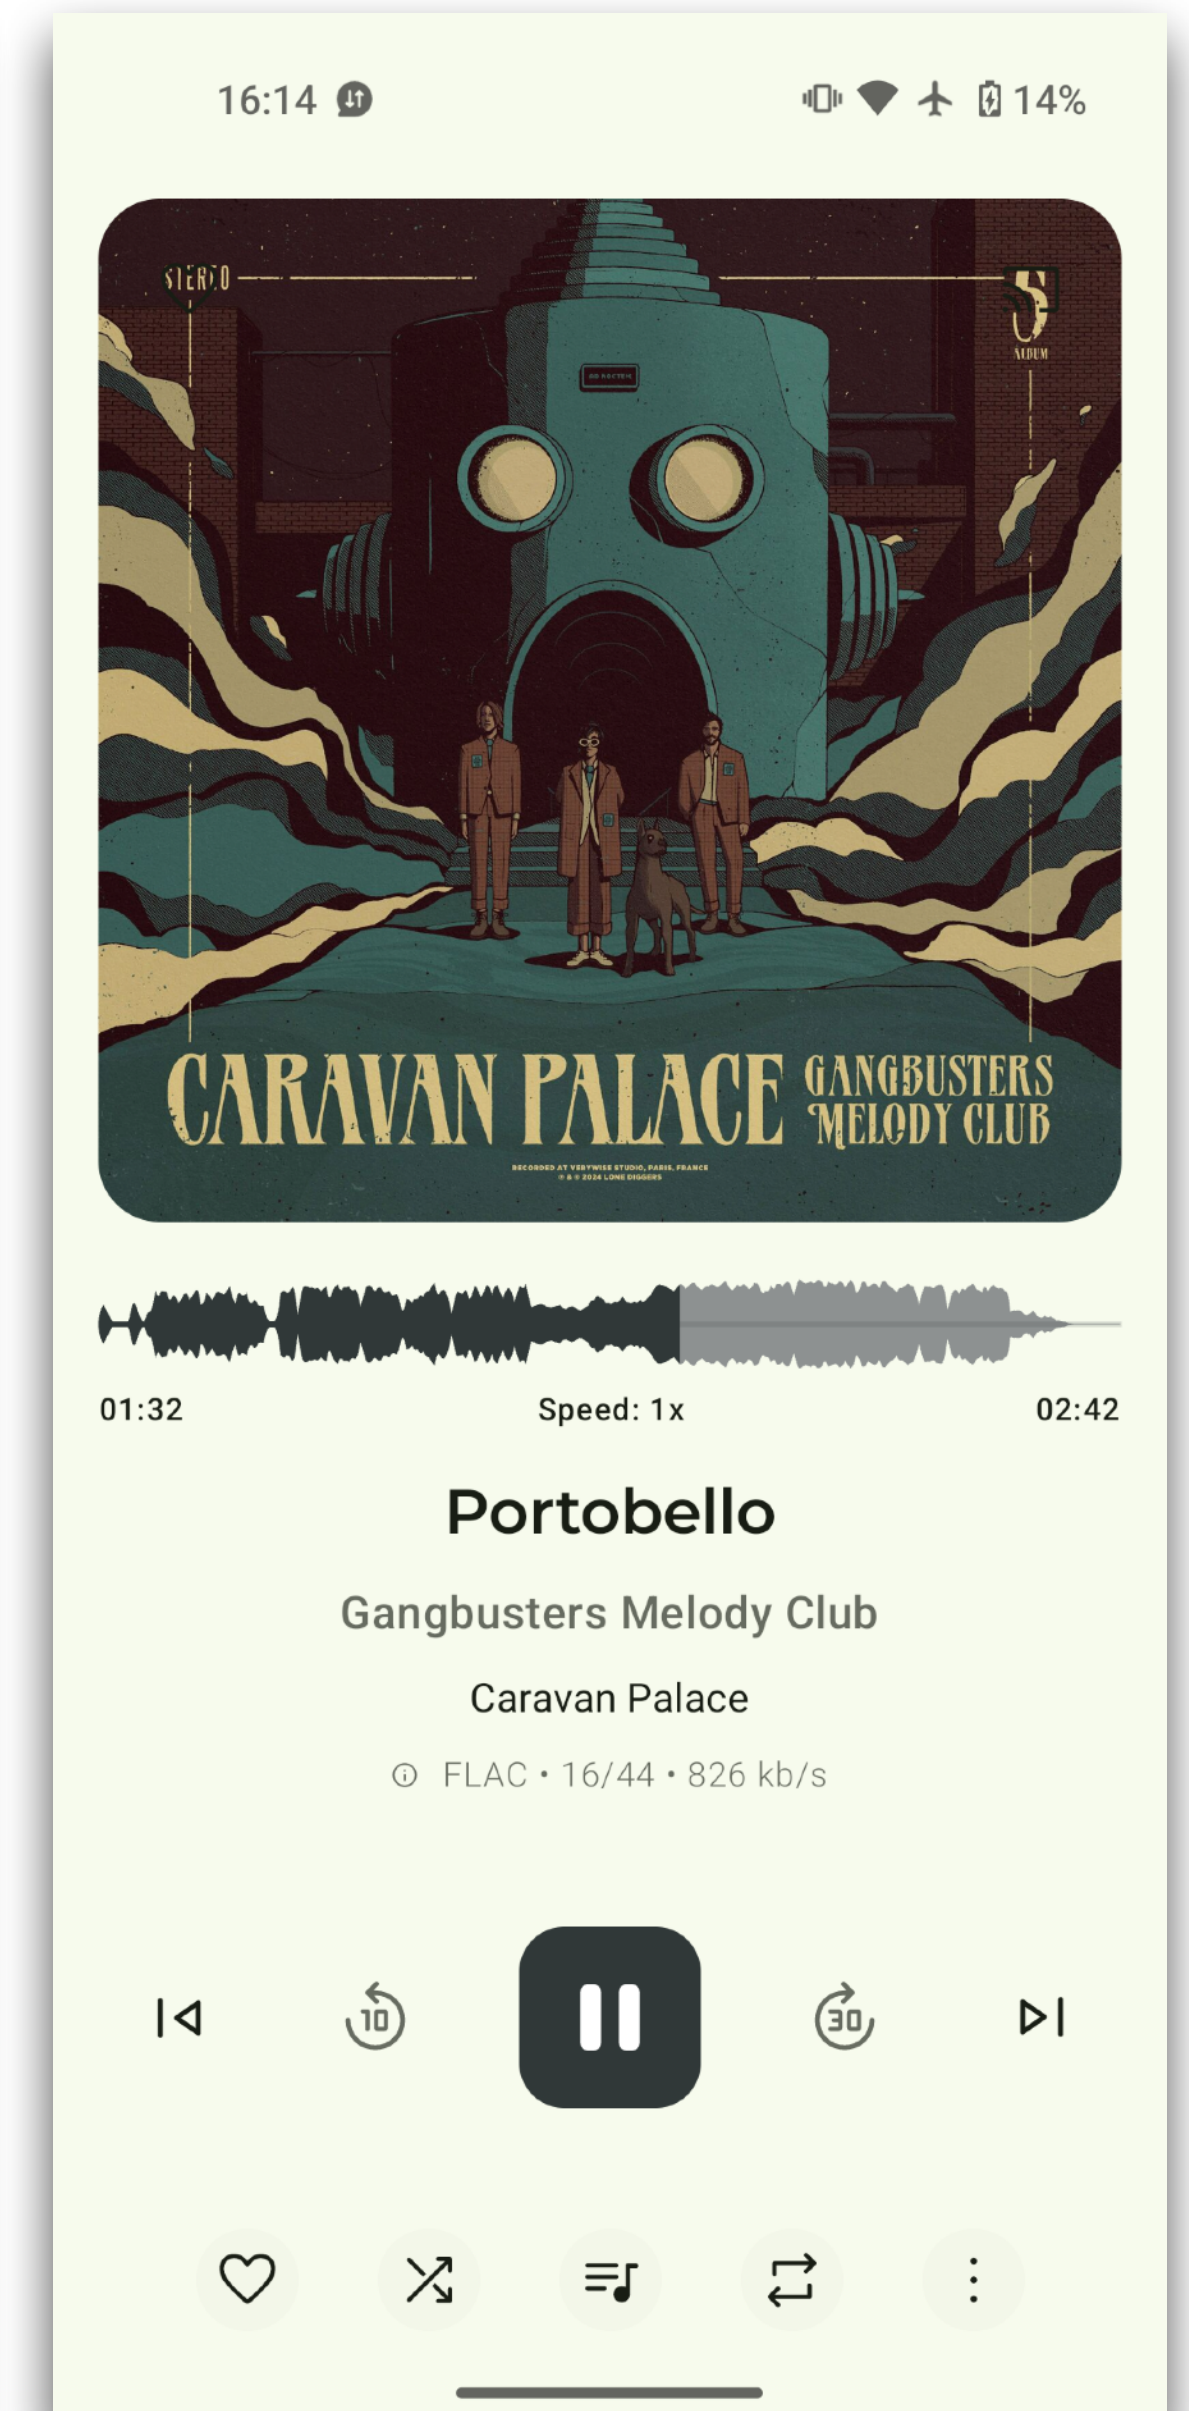

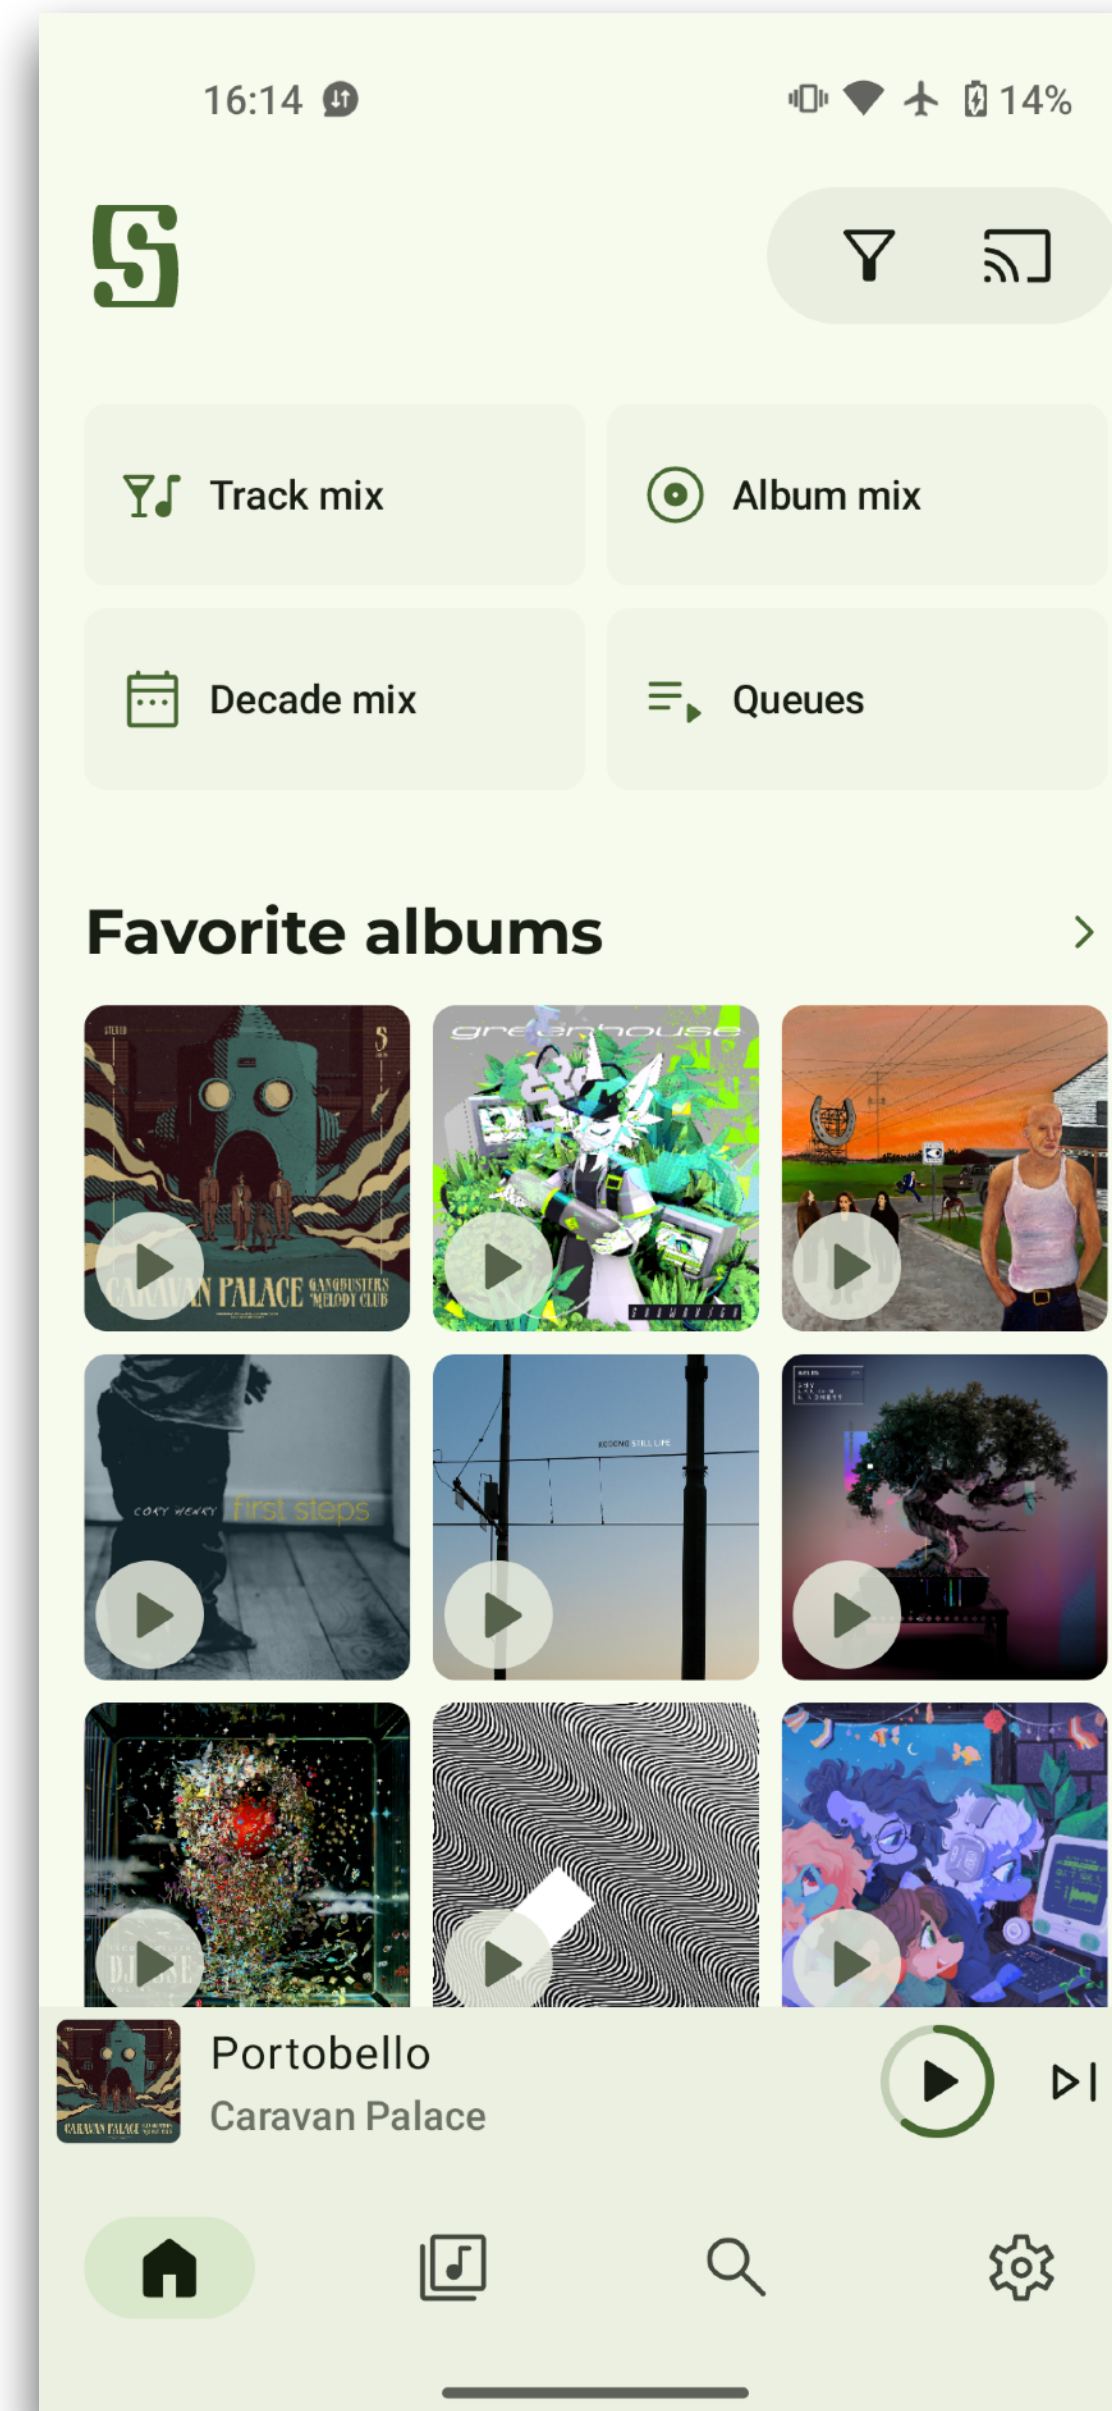

- open source!! :3
- ebenfalls TypeScript
- soll demnächst rewritten werden (mit Electron 🥰), hat ein paar Bugs

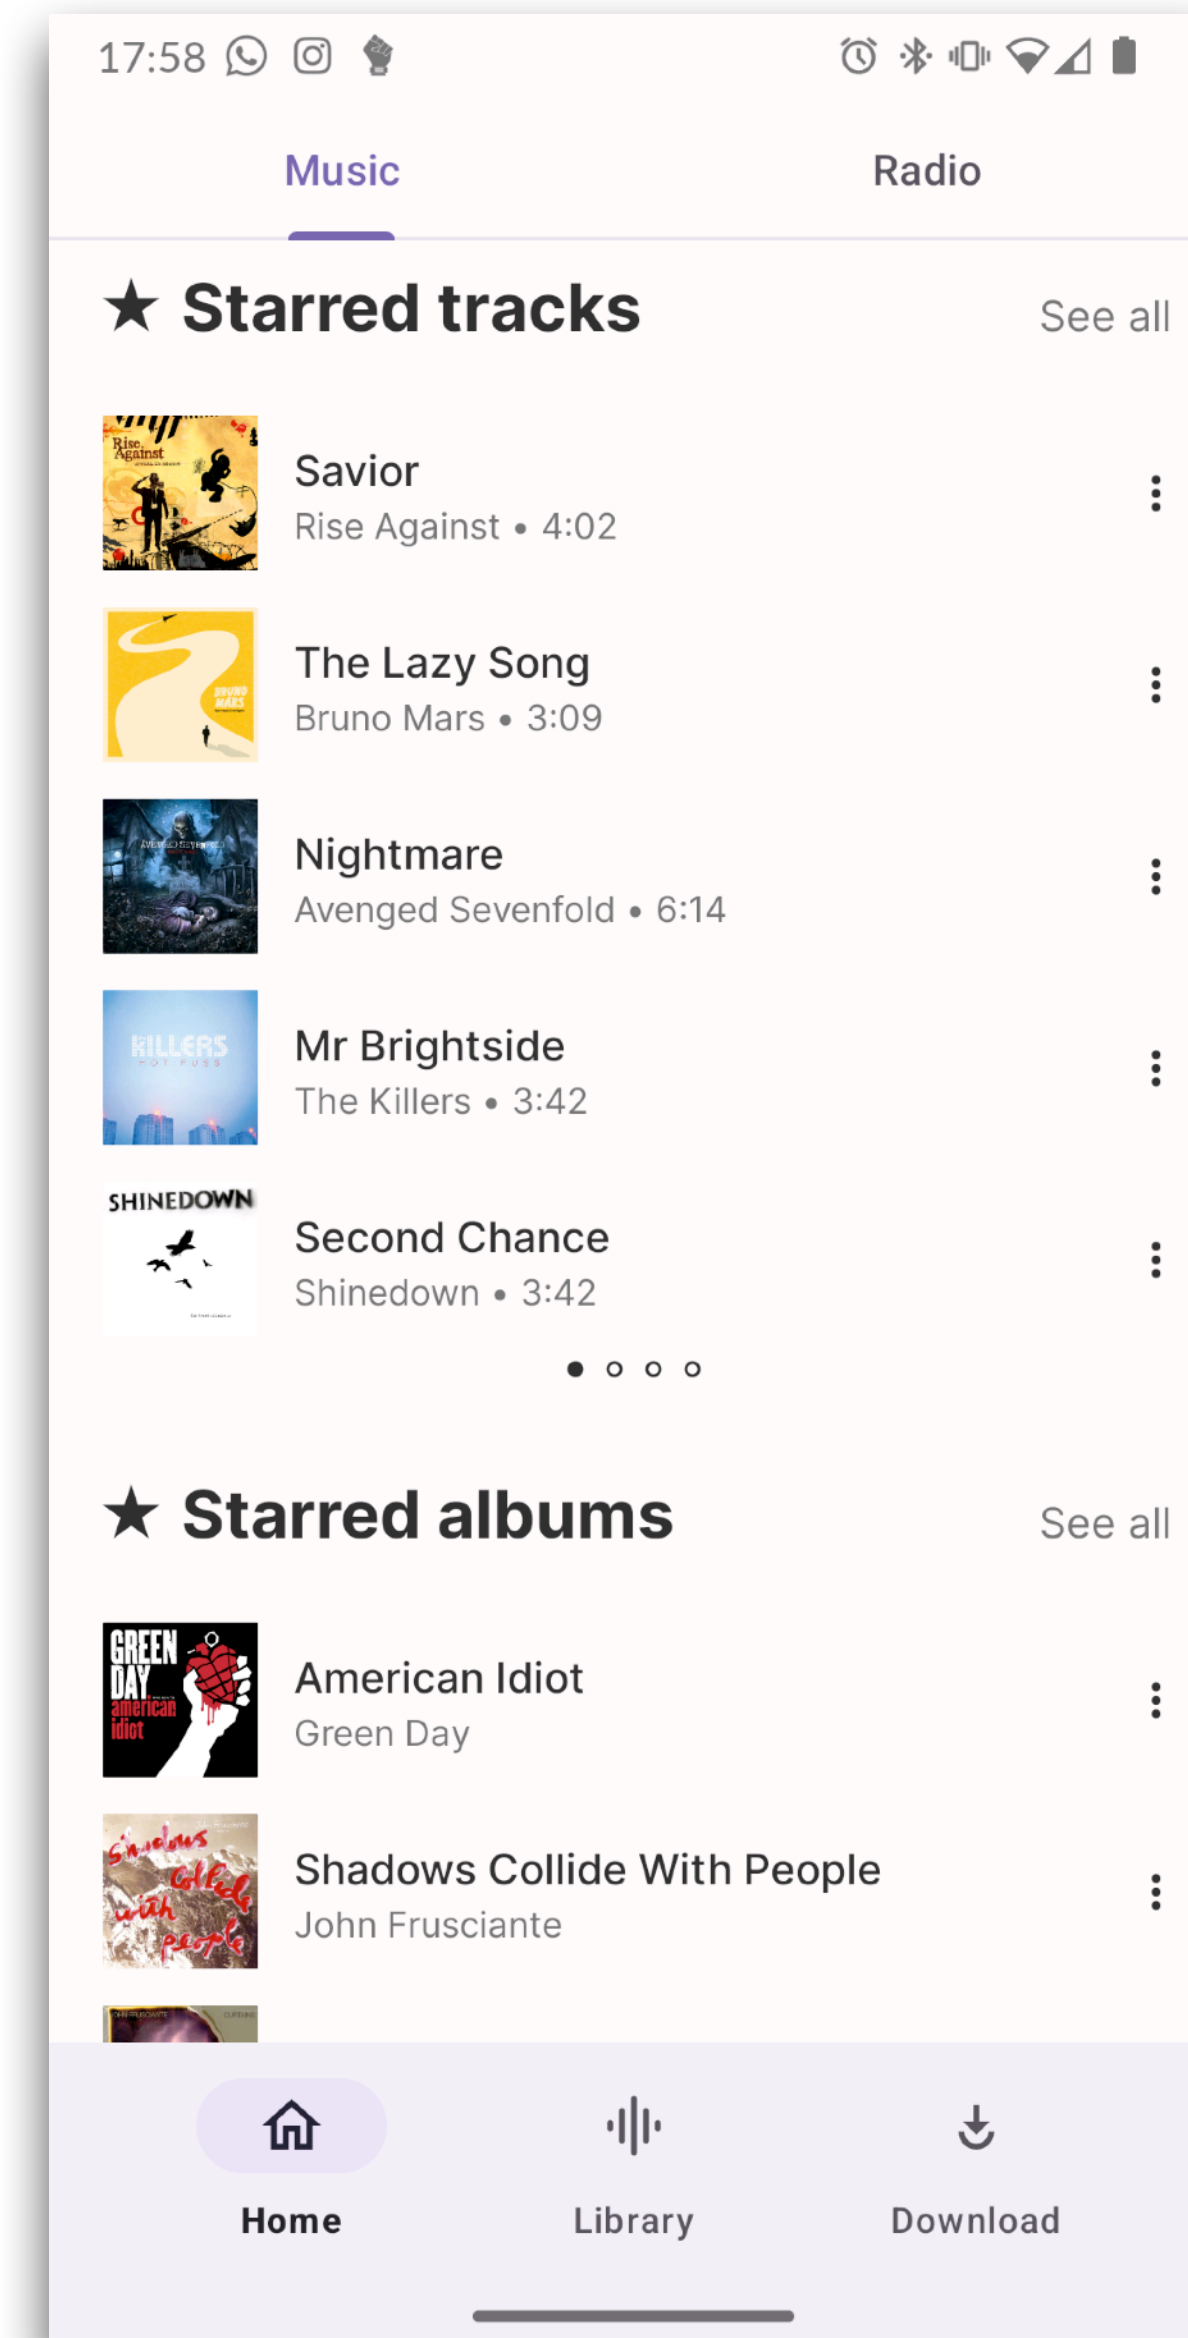

Symfonium (Android)

- 4 USD (In-App-Kauf)
- wird sehr aktiv entwickelt
- nicht open source :(
- kommt auch sehr gut mit großen Libraries klar
- true multi server support

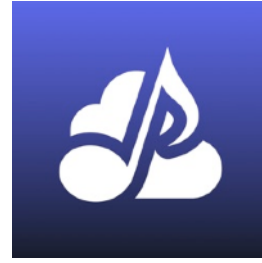

Tempo (Android)

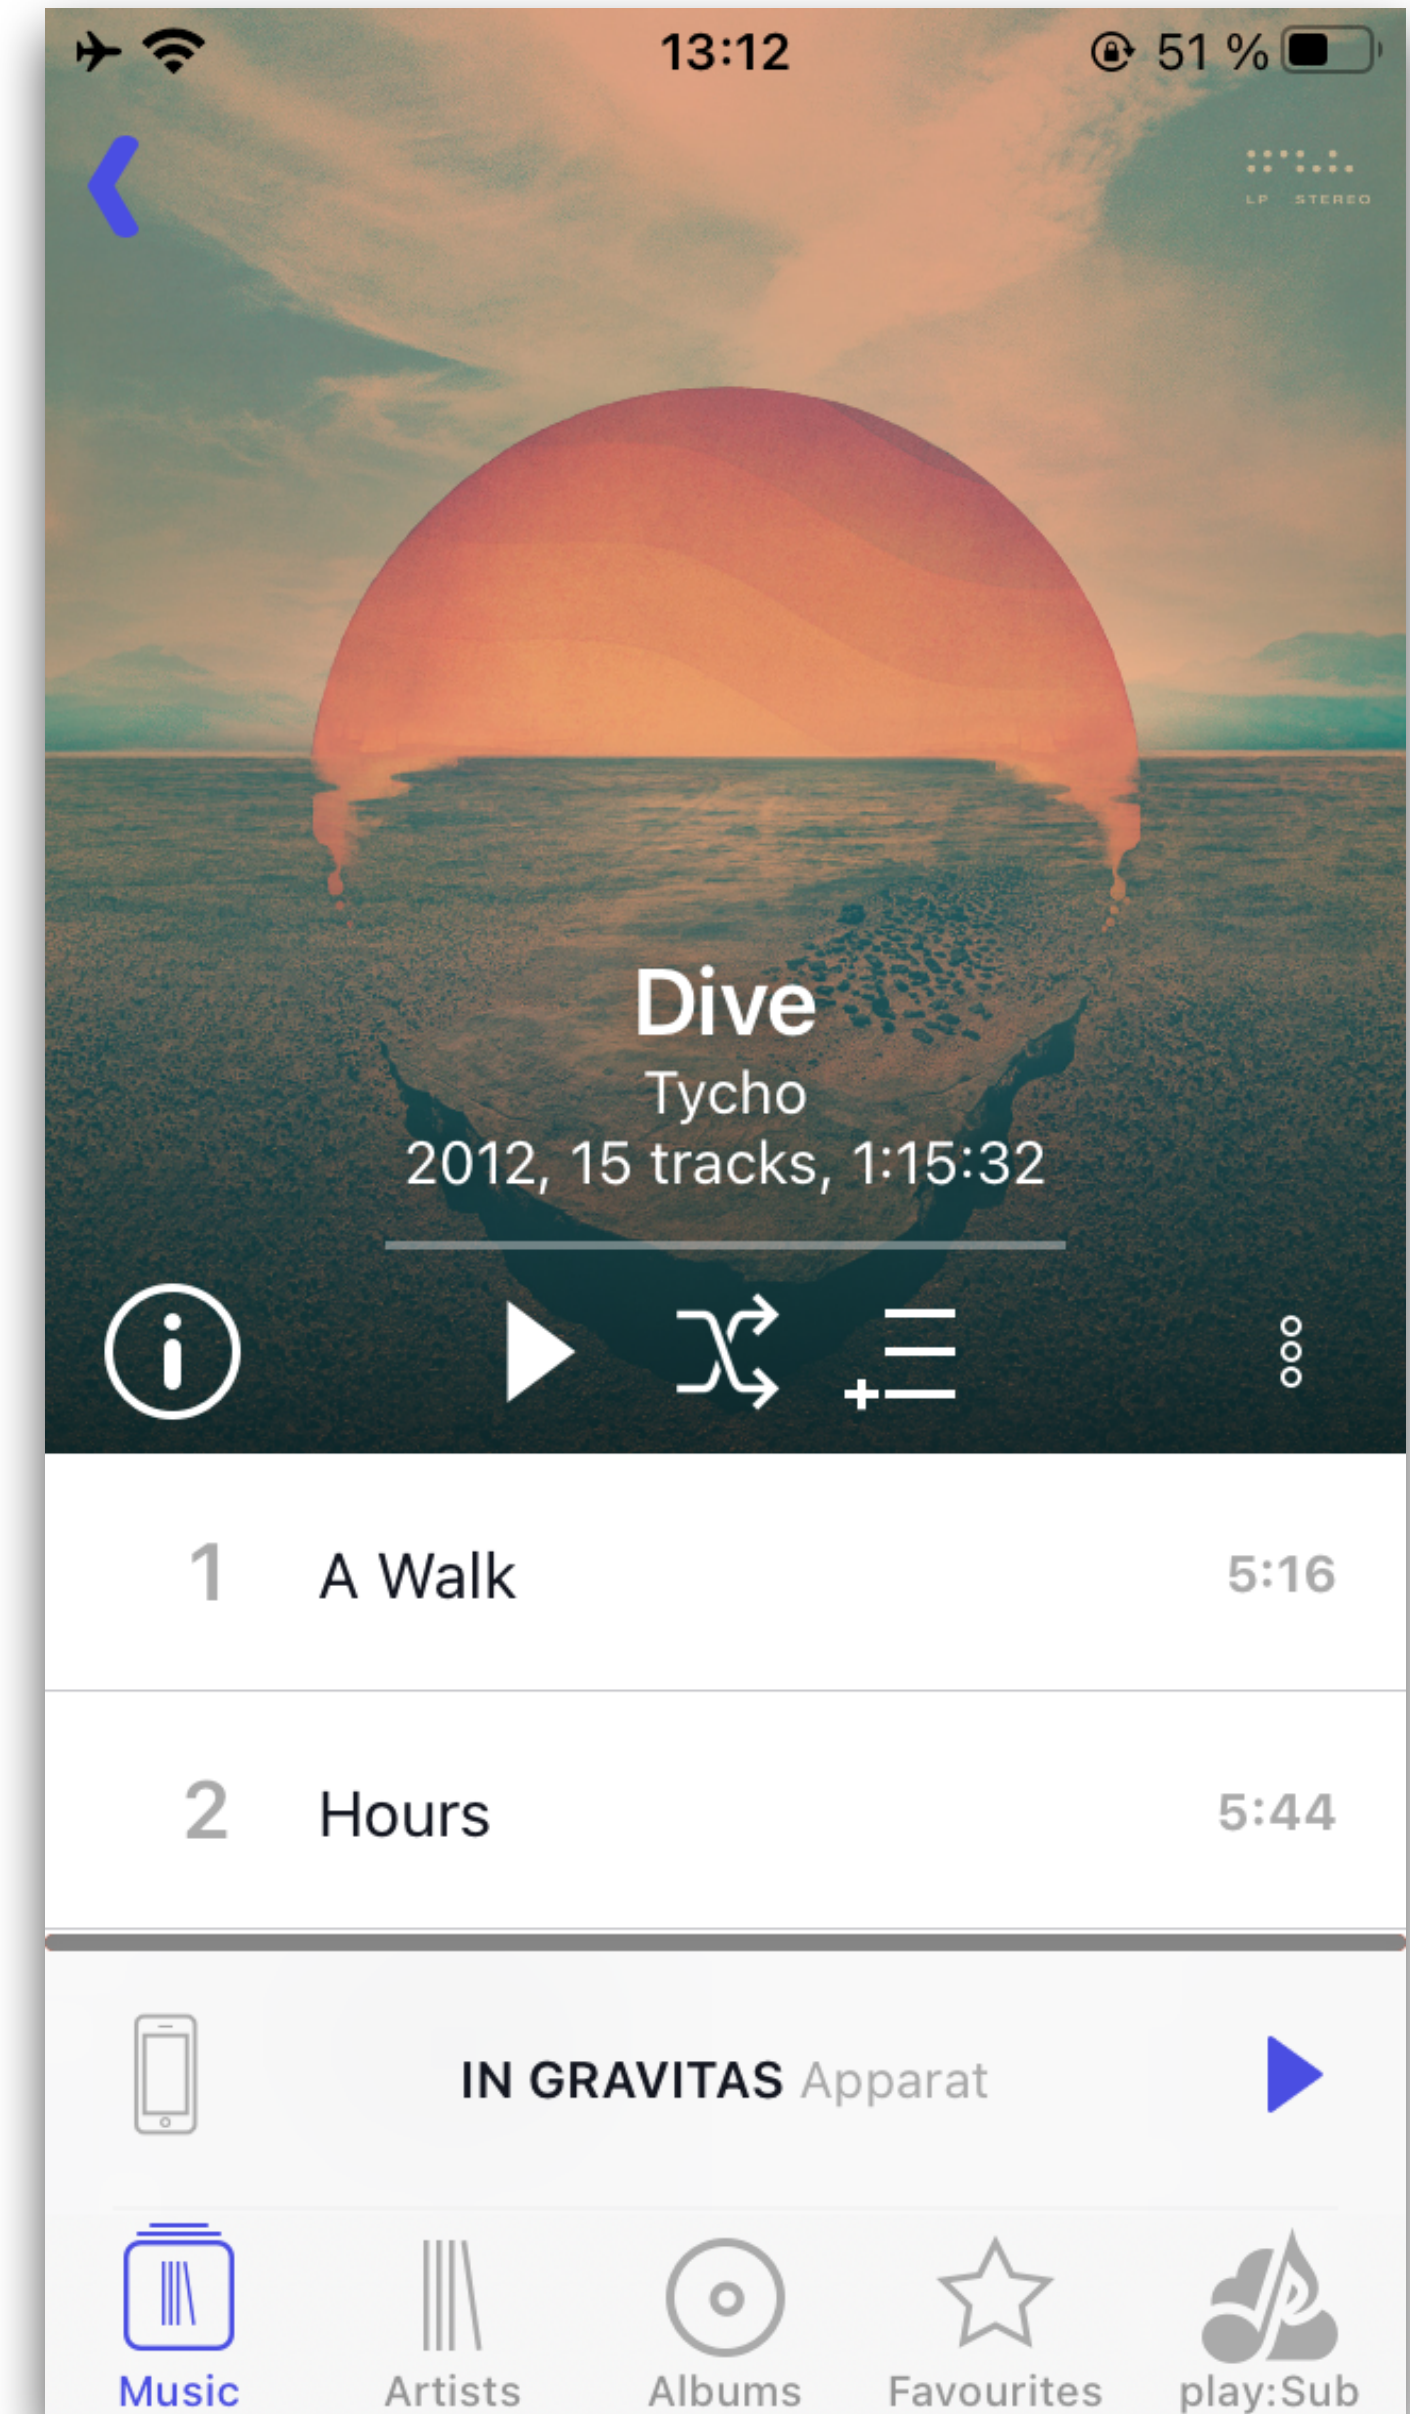

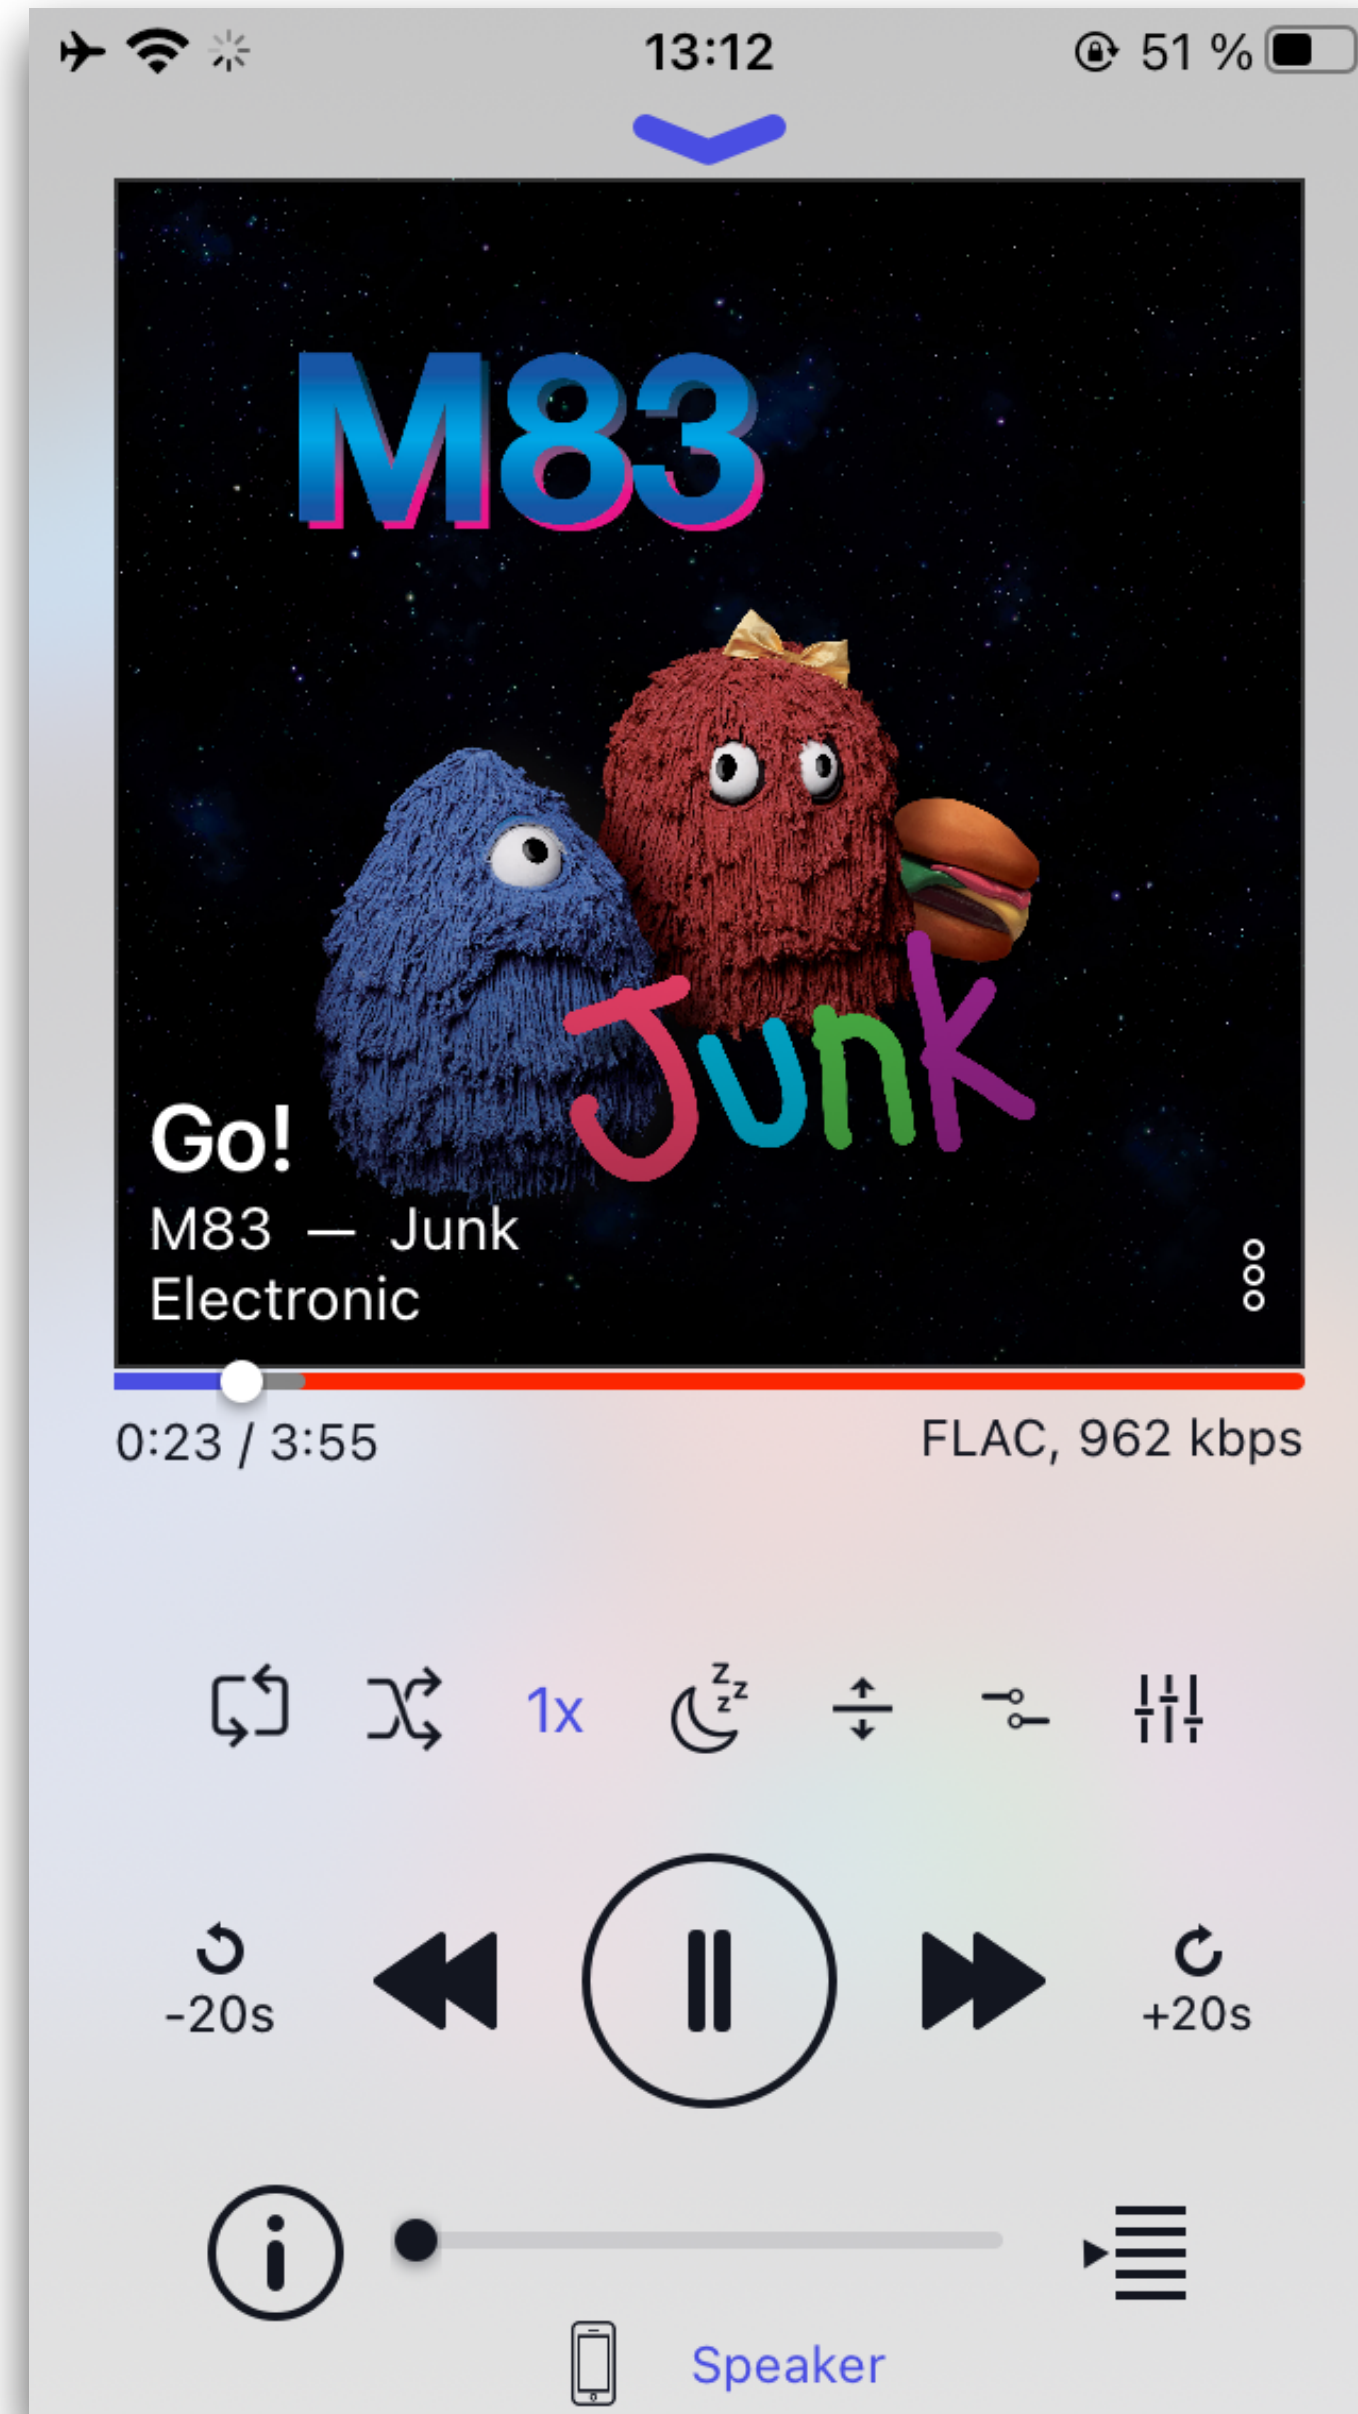

- open source! :3
- gibts auf F-Droid. yippieeee!
- rege Entwicklung

play:Sub (iOS)

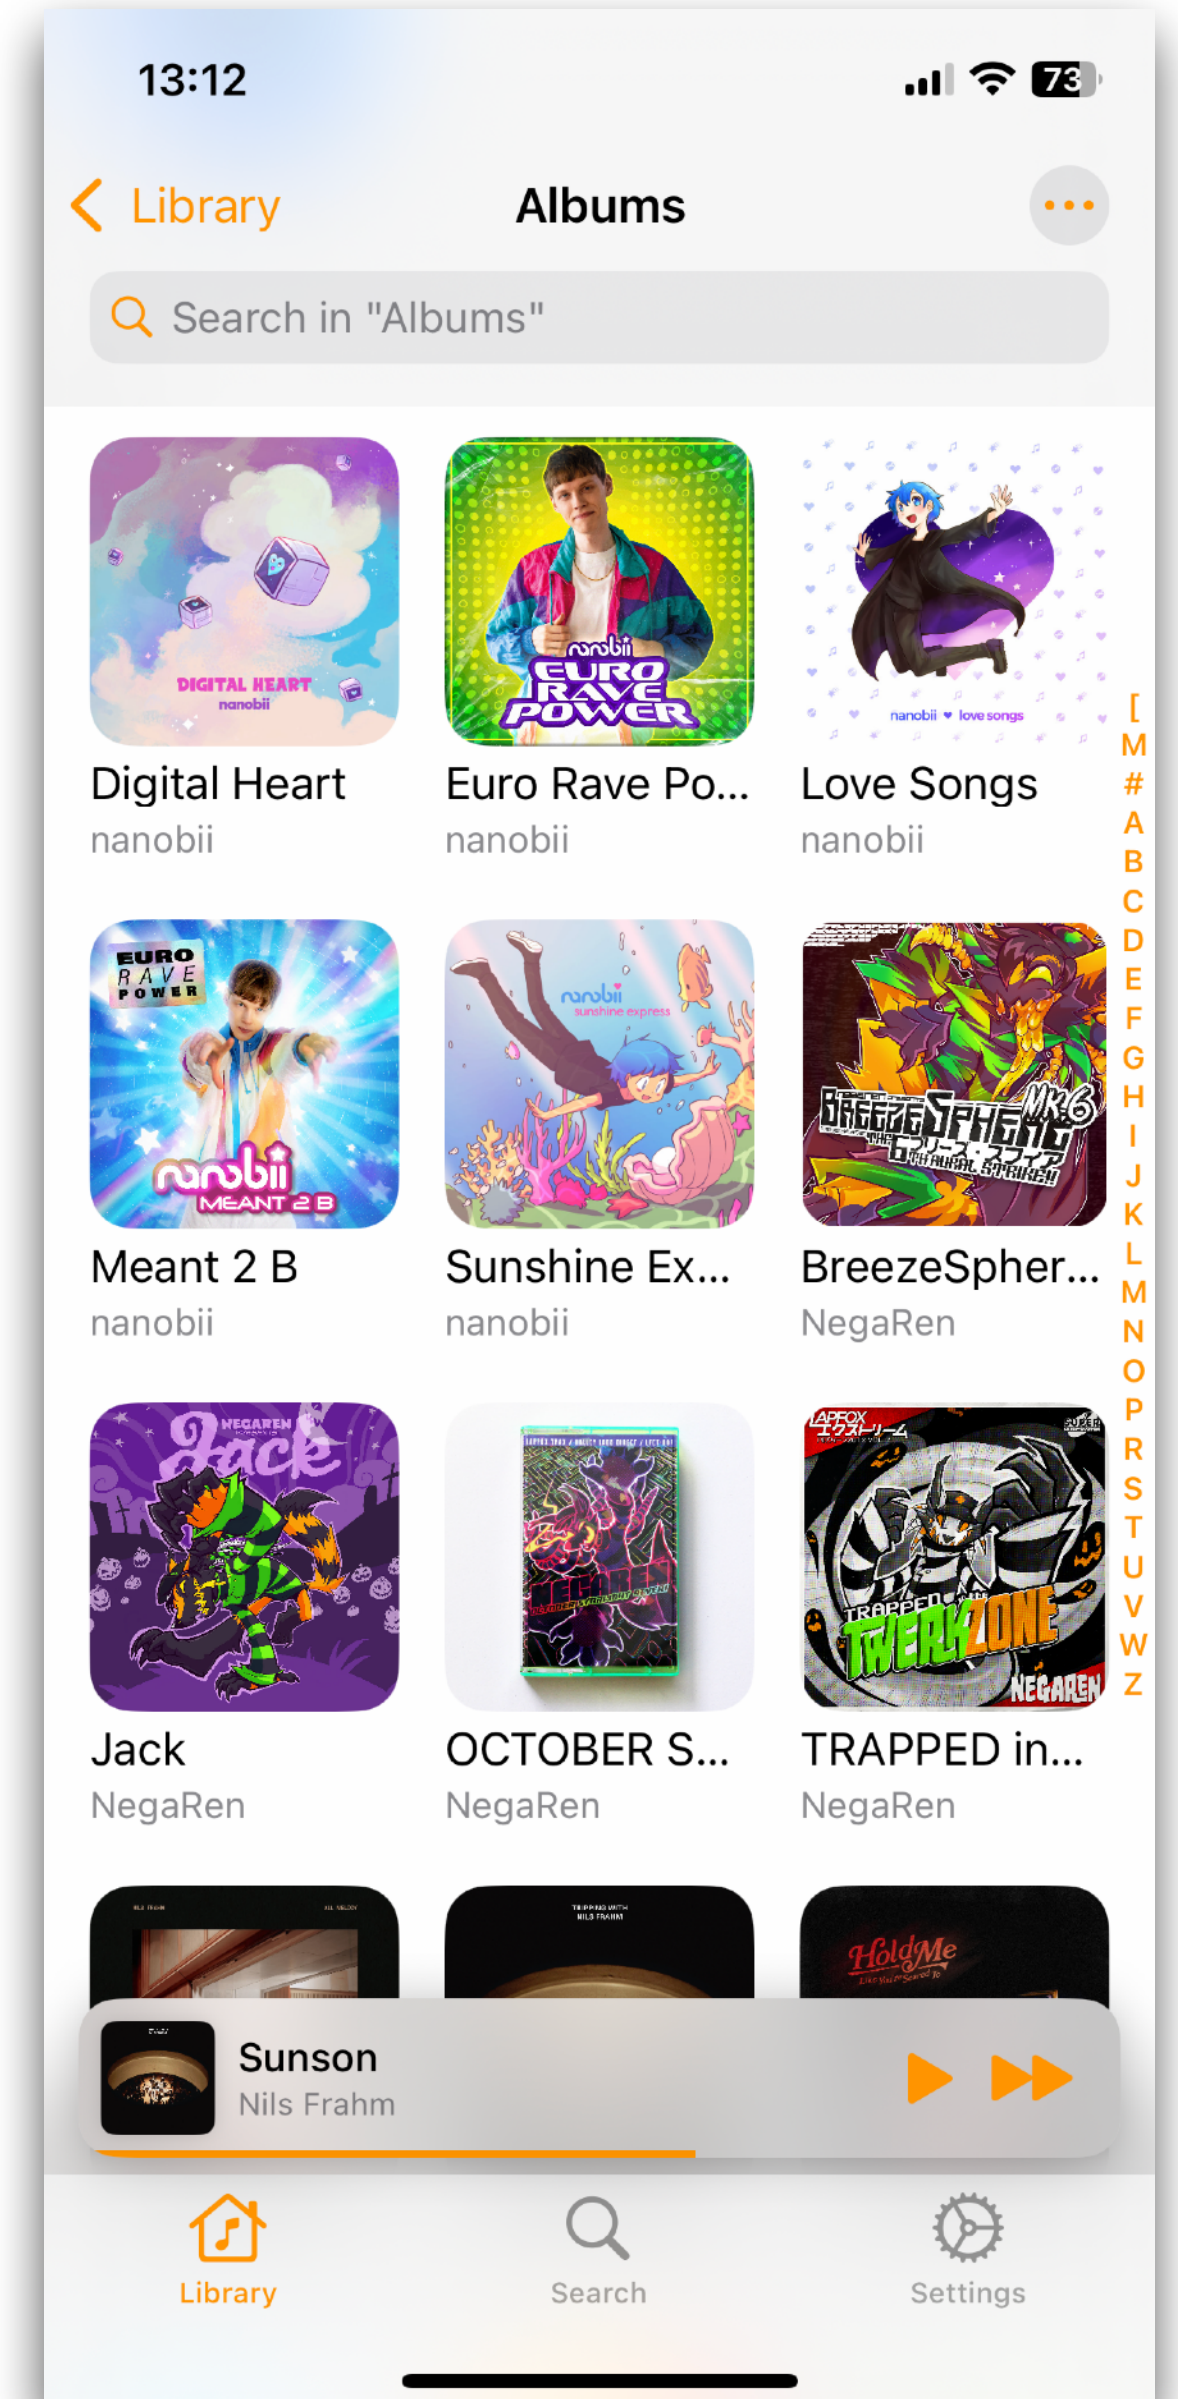

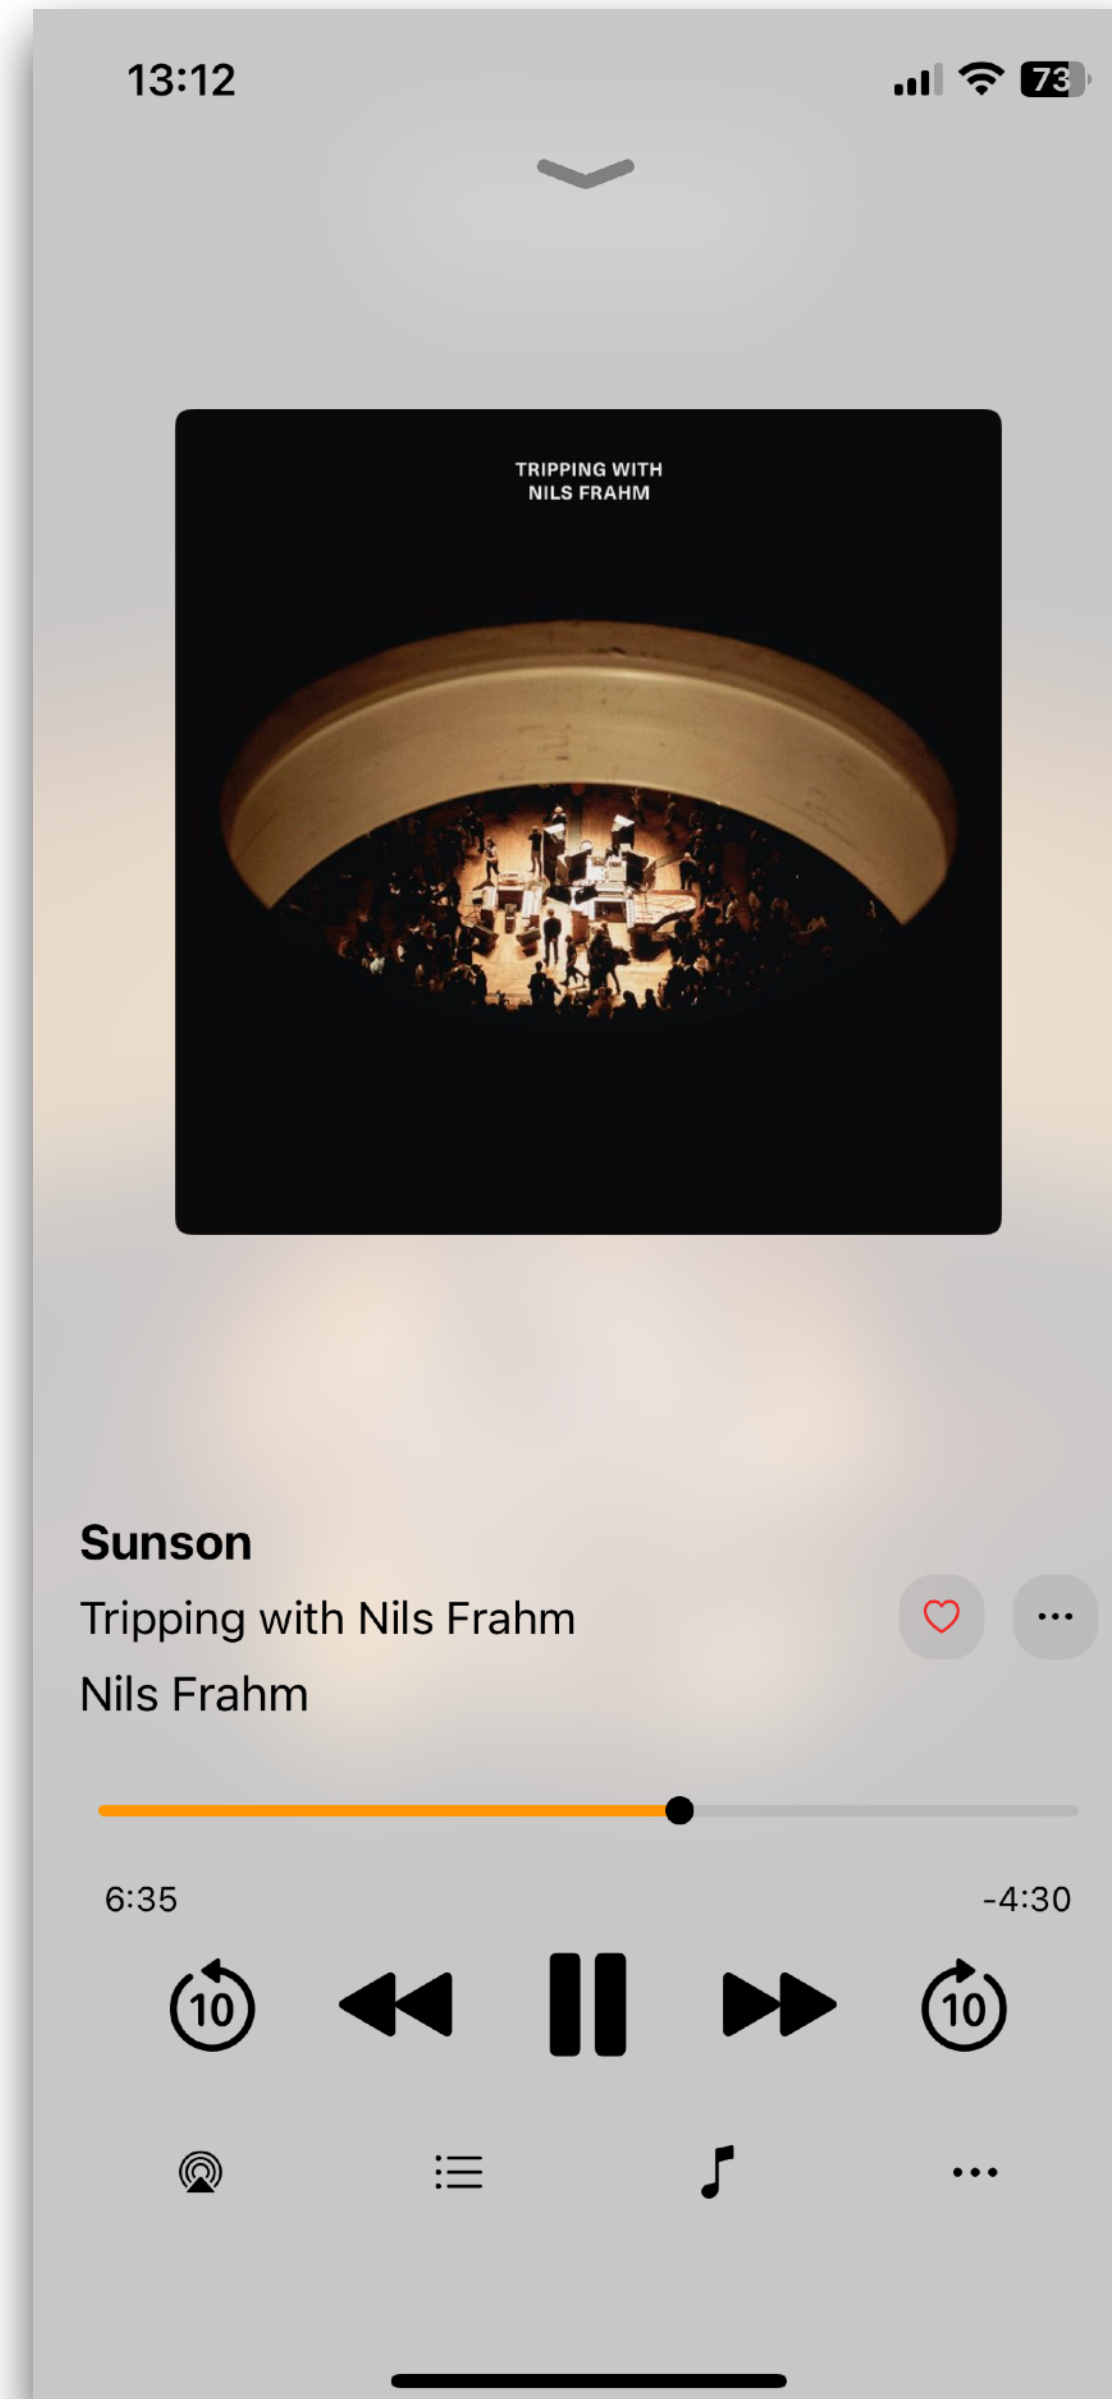

- kostet 6€ im App Store
- nicht open source :(
- Interface etwas eingerostet
- aber: sehr zuverlässig, kommt gut mit großen Libraries klar
- läuft auch auf alten Apple-Geräten noch gut

Amperfy (iOS)

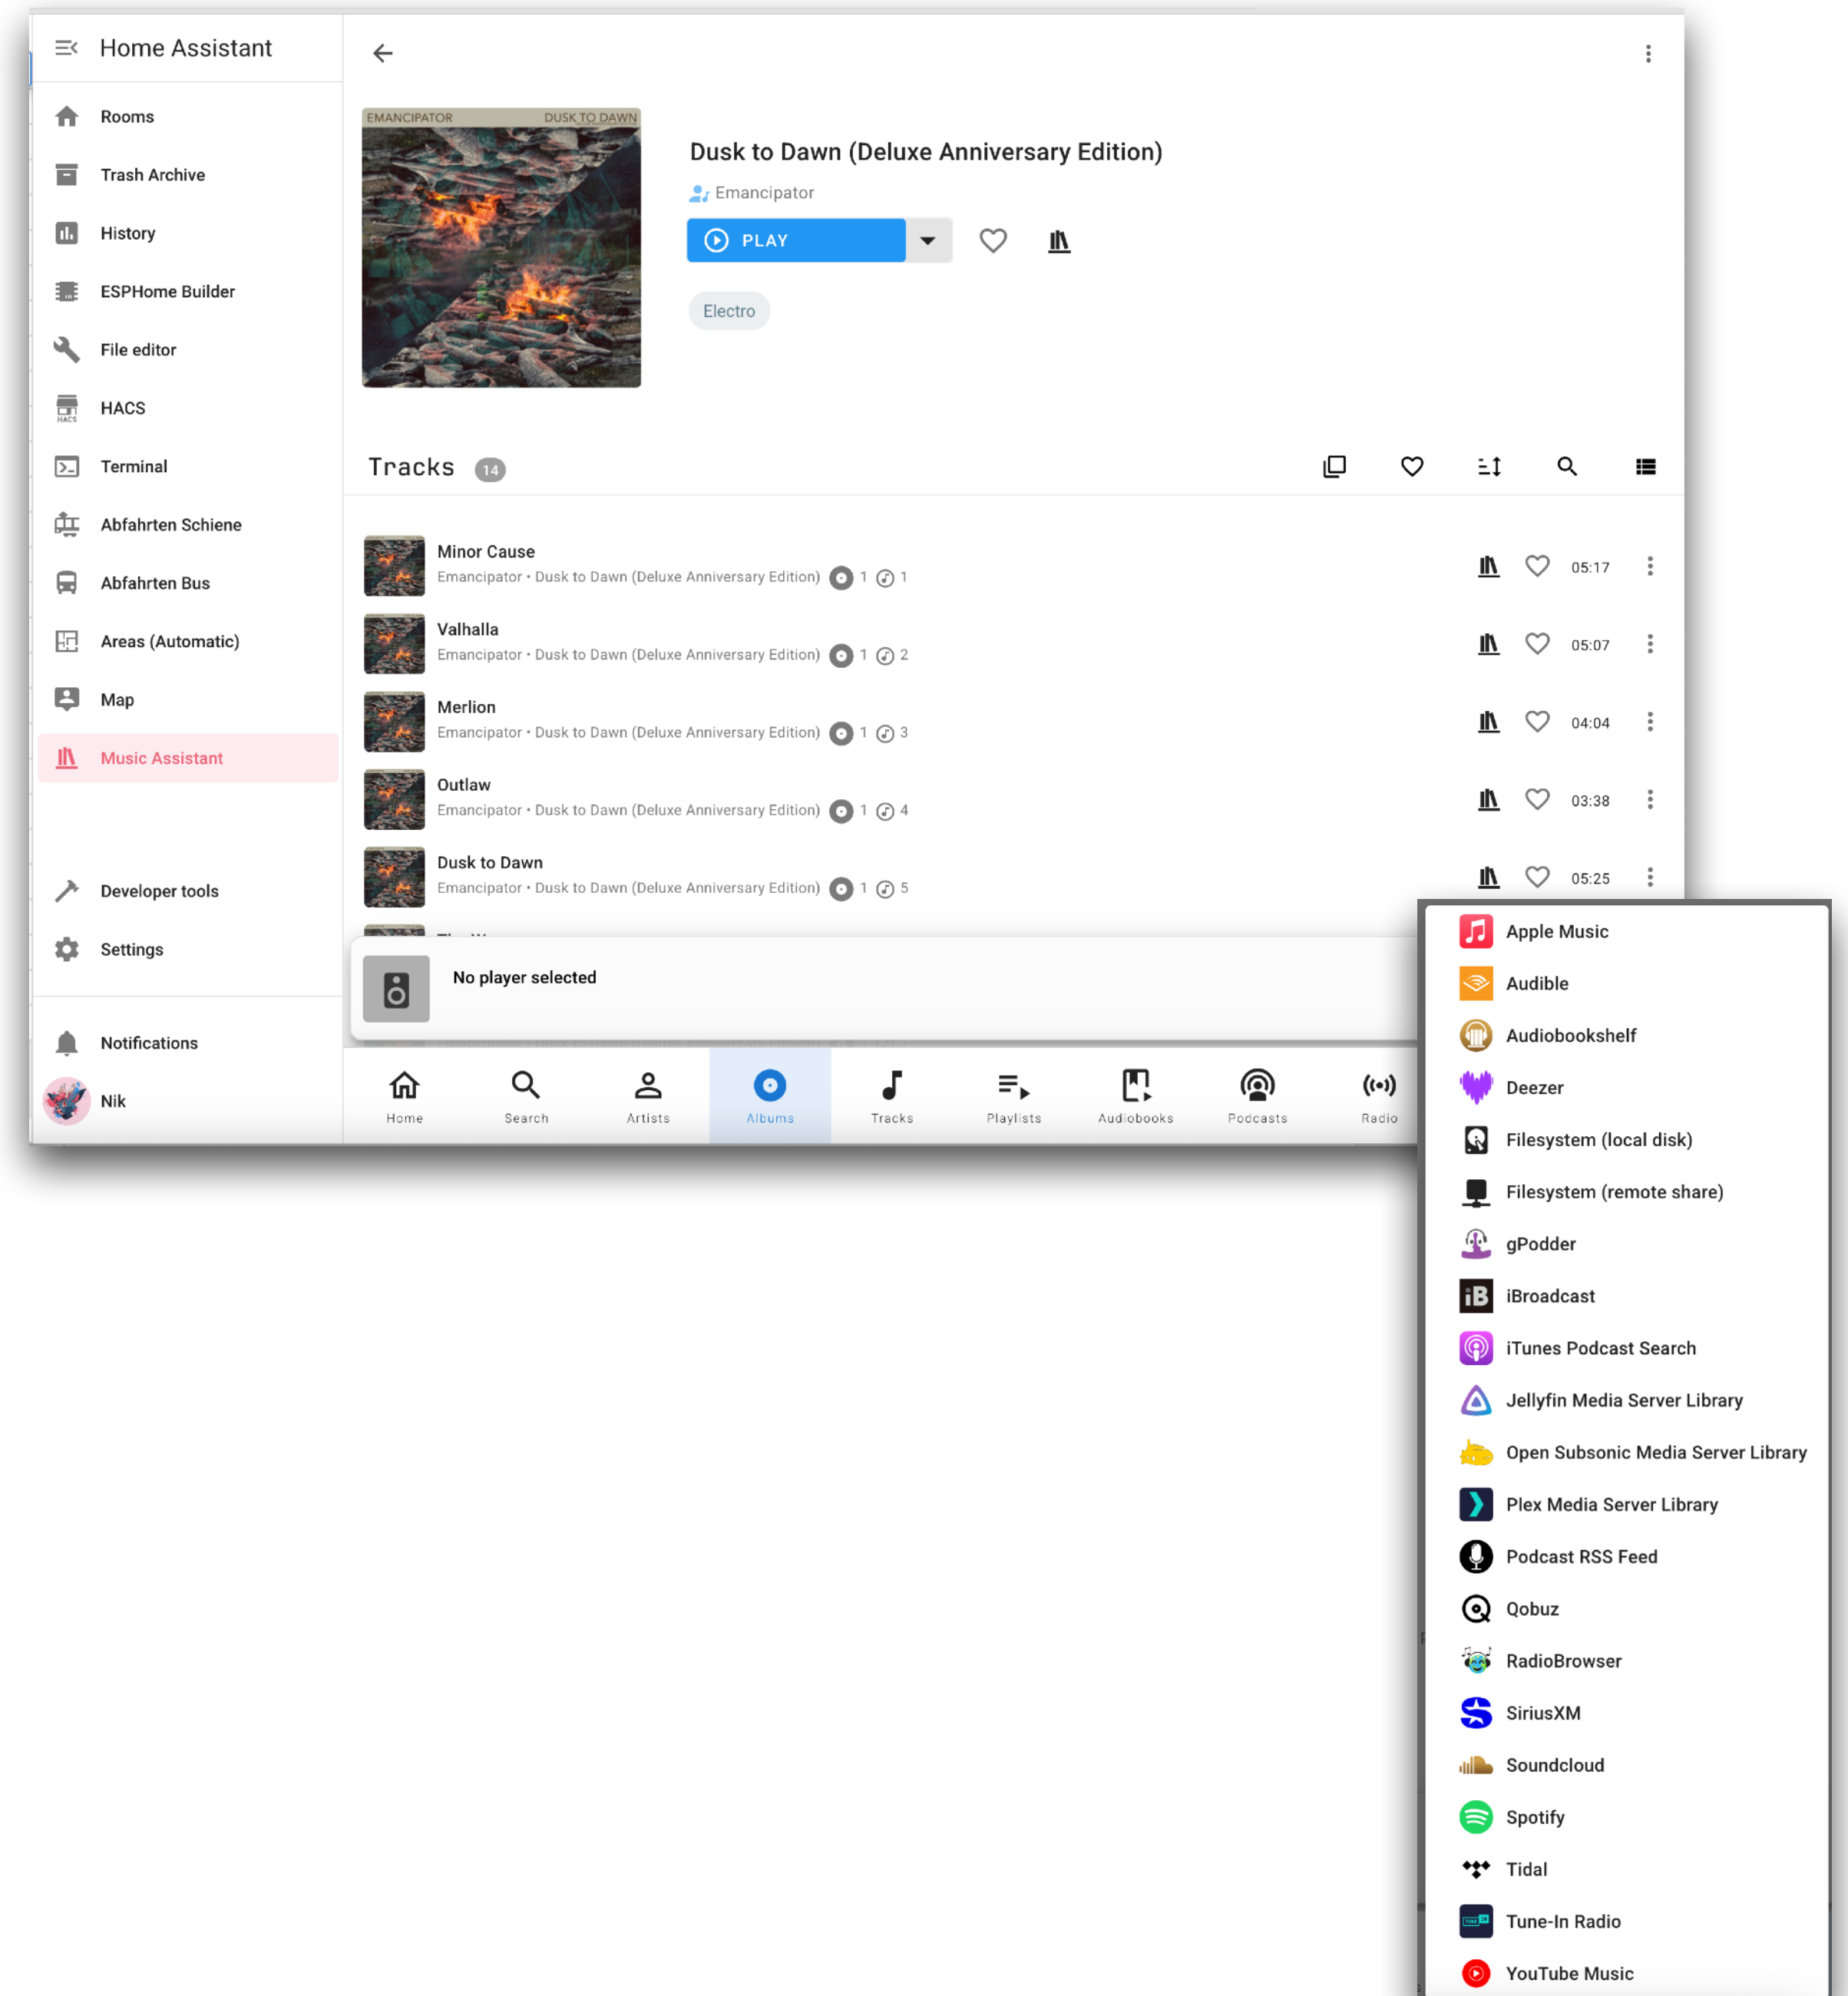

- open source!! :3
- seltene Updates, aber immer sehr umfangreich
- gerade noch ein bisschen Probleme mit Rendering / Lazy Loading (I think?)
- hilft mit!

Music Assistant

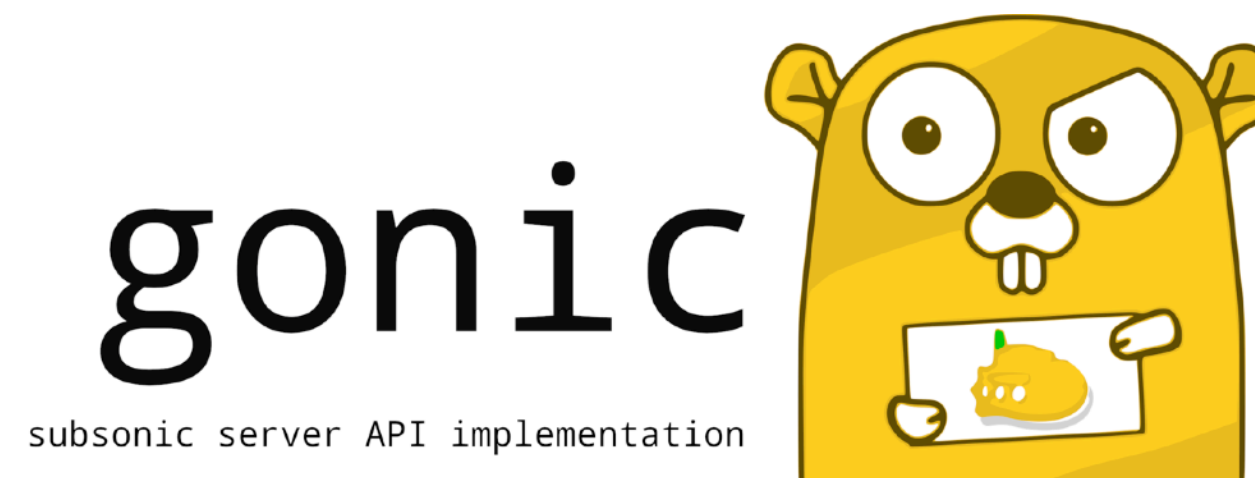

- integriert sich in Home Assistant
- Kann viele Quellen auf einmal ansprechen
- kann auf allerhand smarte Lautsprecher und co streamen

Caveats

- Organisation der Library verlässt sich zu 100% auf korrekte Metadaten
- Ihr selbst seid für die Reliability verantwortlich
- Navidrome-Webinterface kann kein Gapless Playback
- Navidrome kann nur einen singulären Ordner als Library nutzen

- beliebteste Alternative: gonic

Woher kommt eigentlich diese...

Musik?

Musik!! Aber woher?

- physische Medien rippen
- im Internet oder im Laden kaufen
- aus der Bücherei leihen (!!)
- vom Laster gefallen

rippen von CDs

... was brauchen wir?

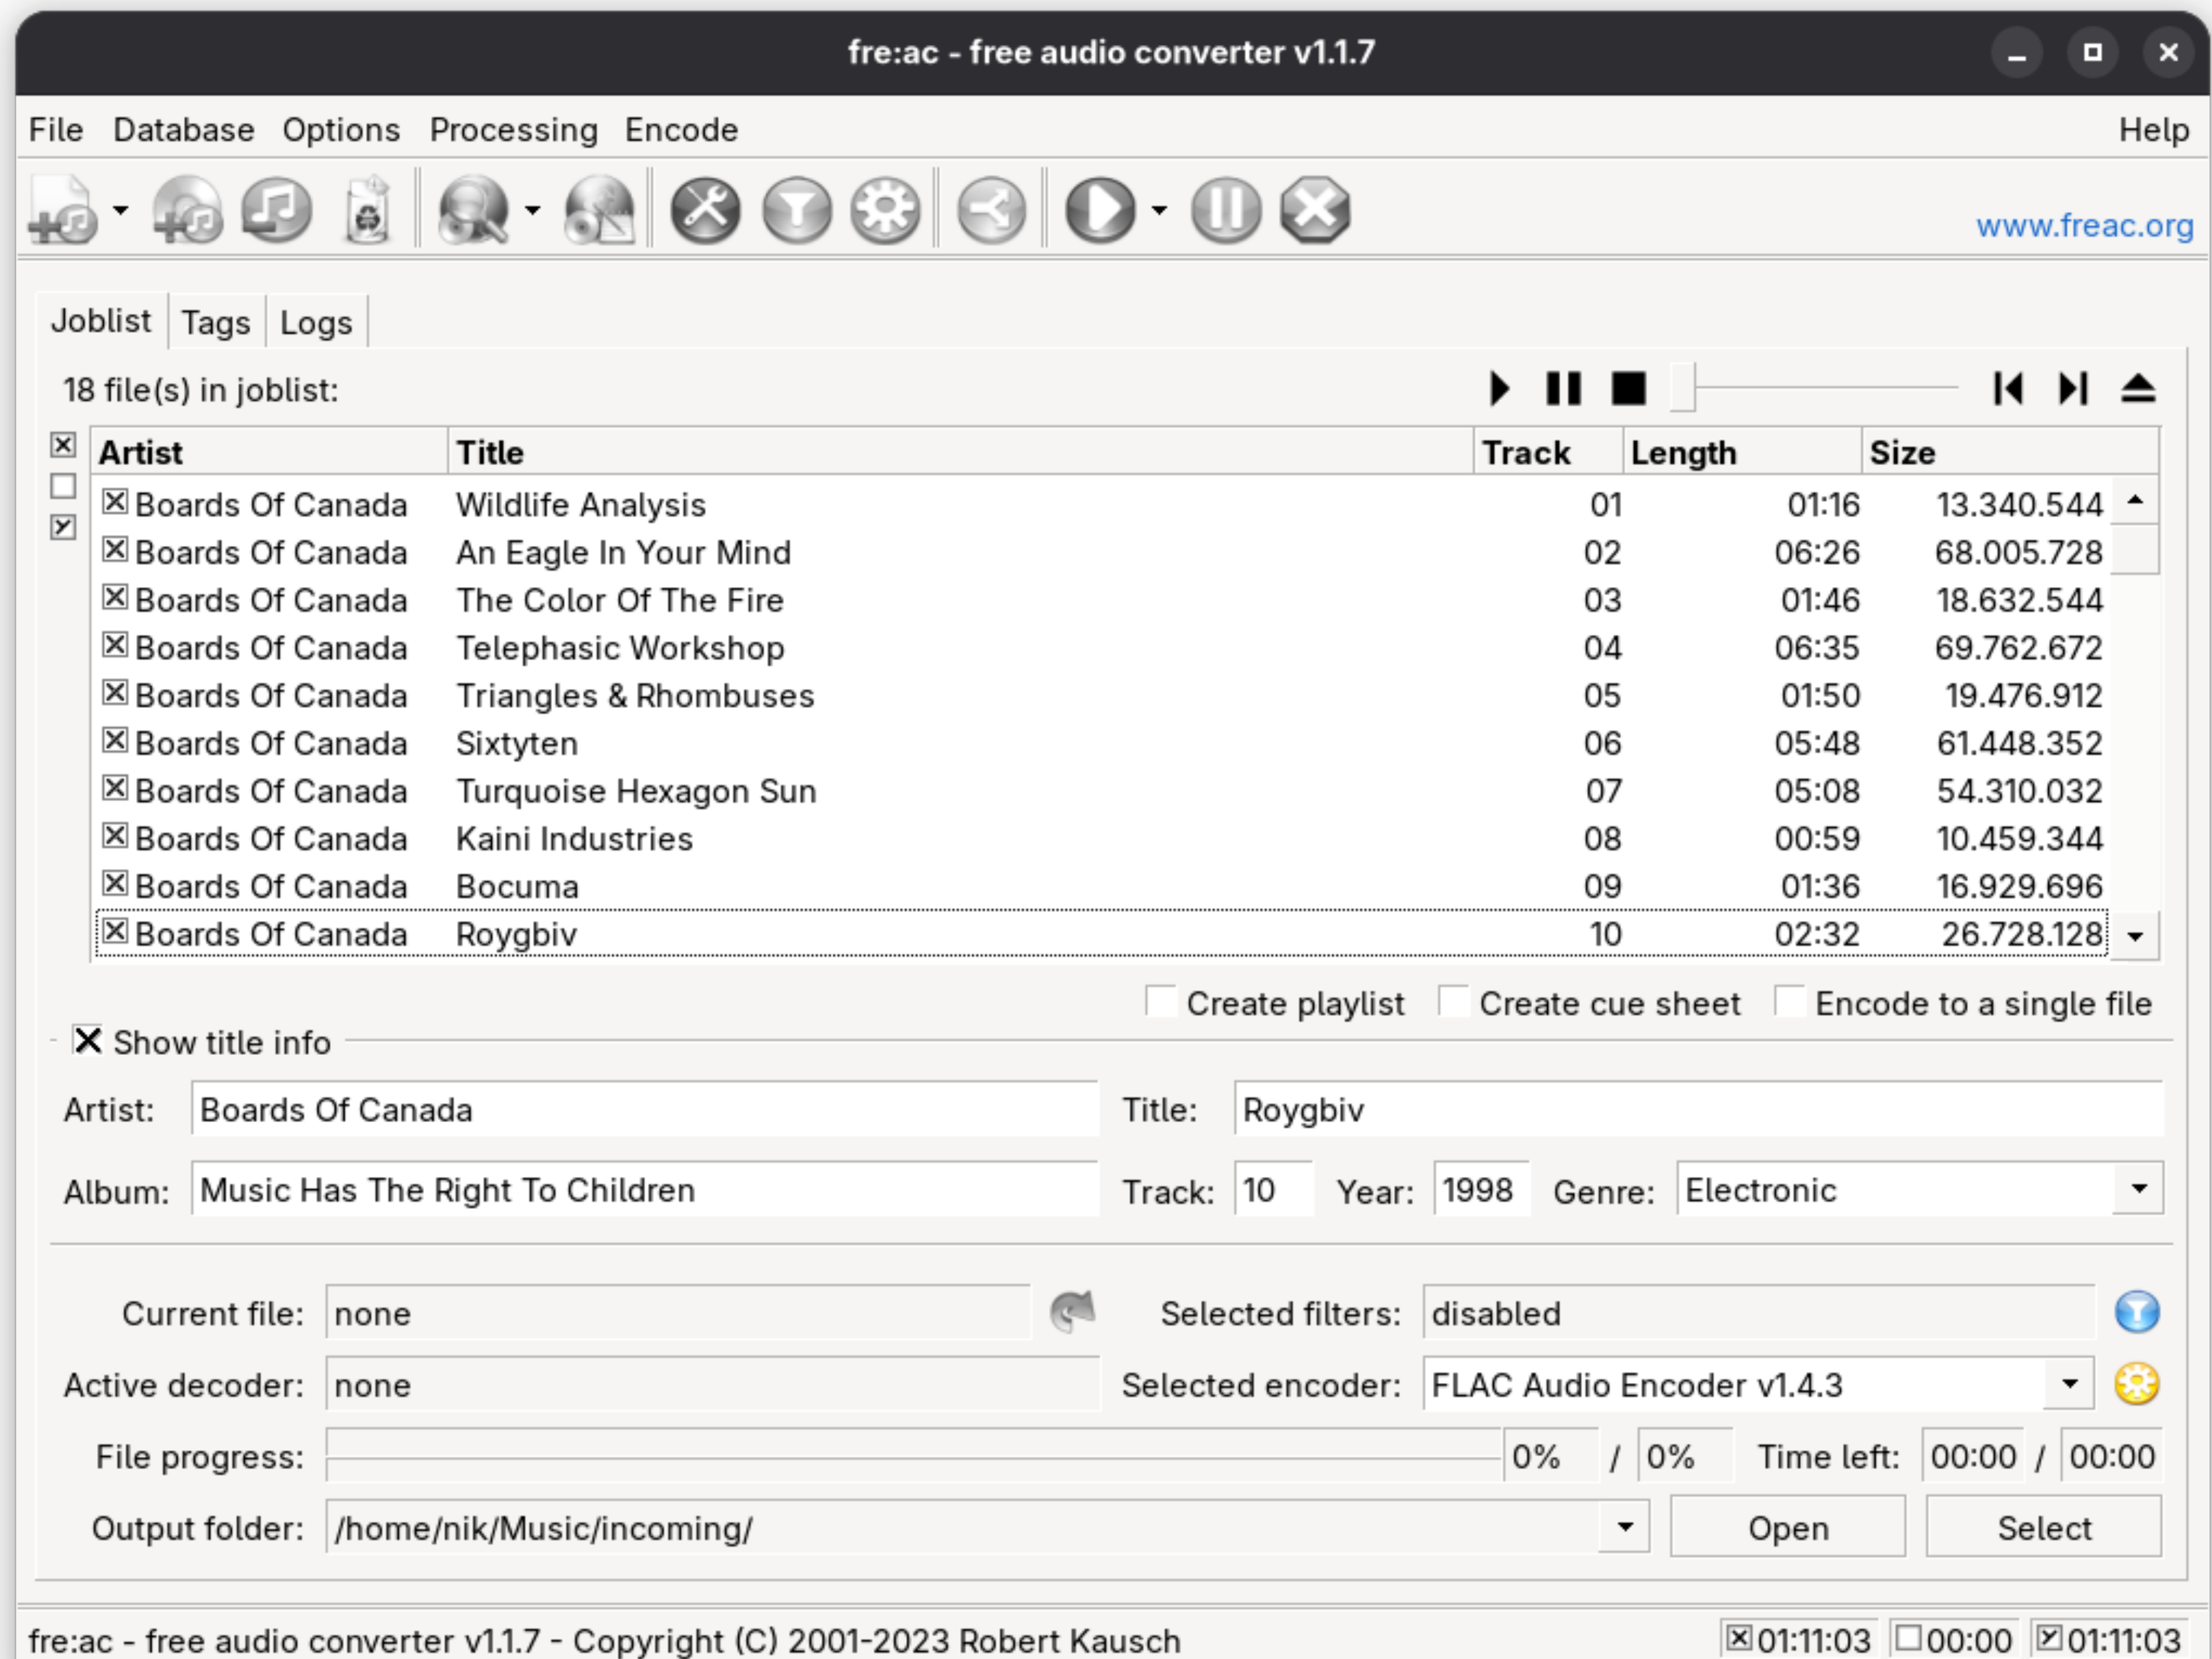

- combooper
- *idealerweise* mit optischem Laufwerk

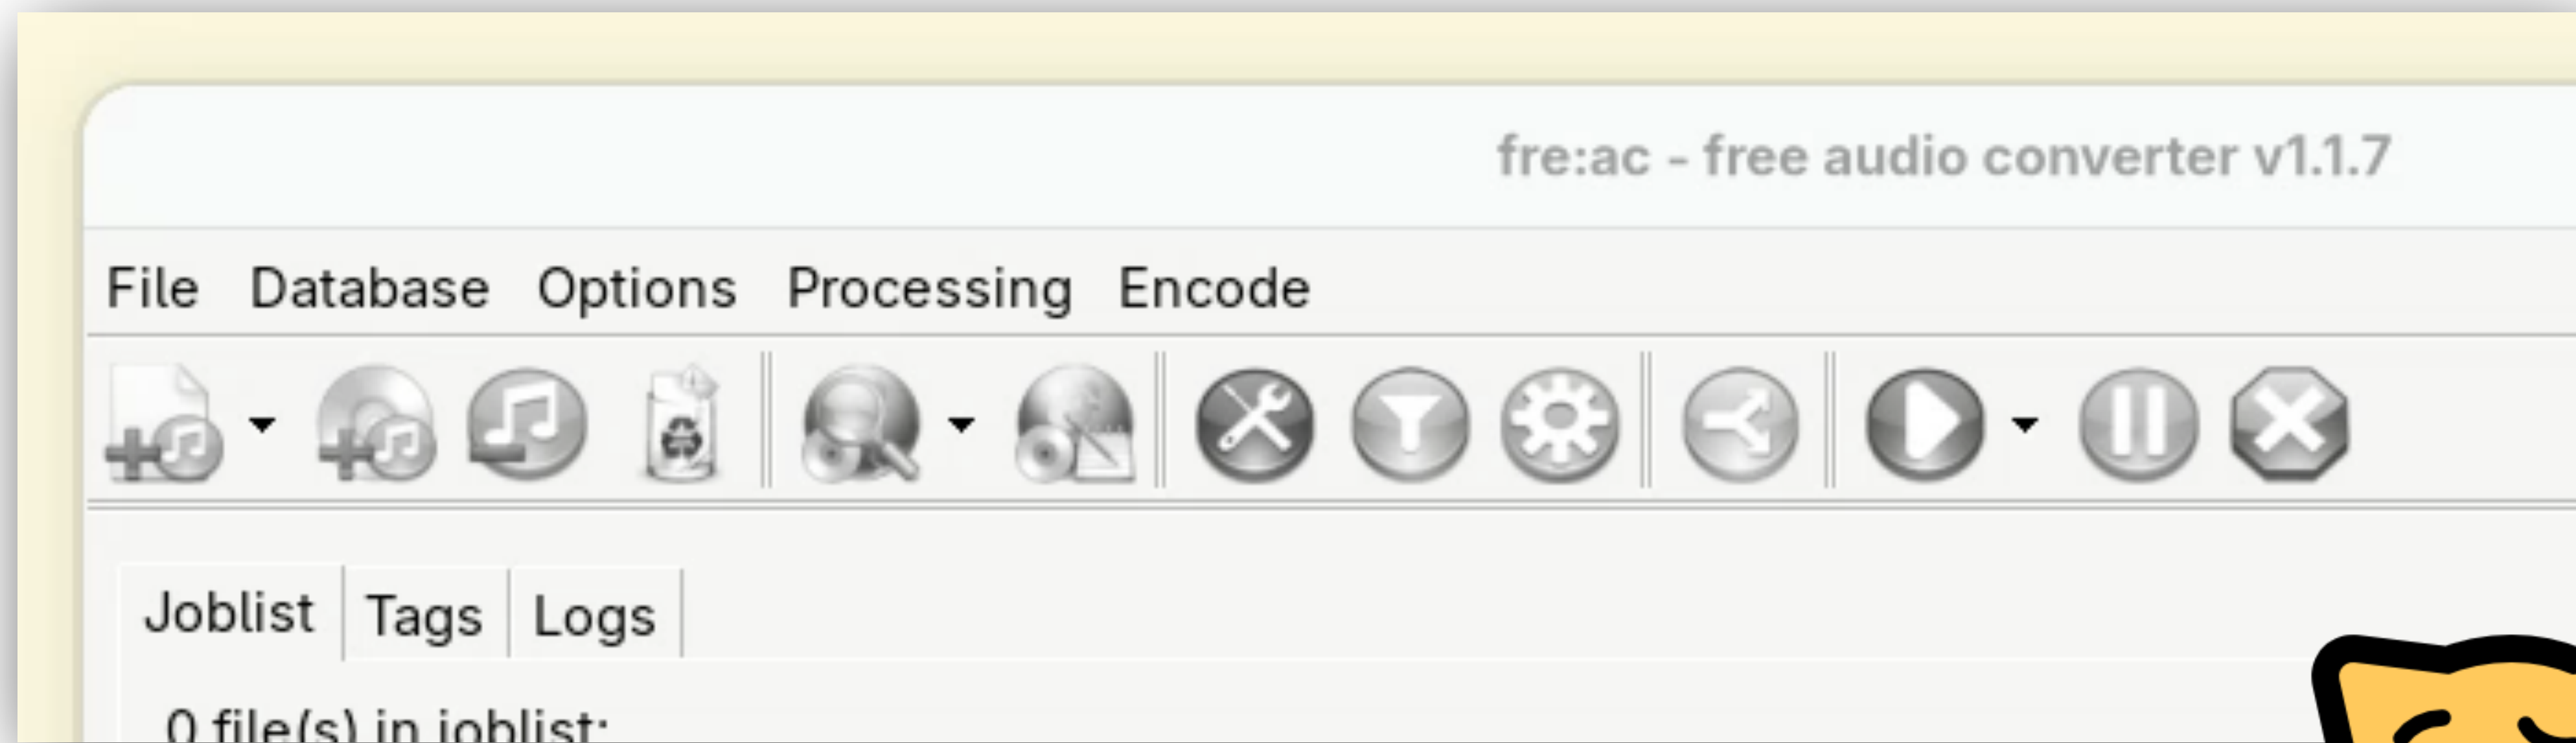

rippen von CDs

... womit eigentlich?

- Linux:
 - fre:ac (ziemlich mächtig)
 - Sound Juicer (simpel, GTK)
- macOS:
 - XLD (alt, aber tut)
 - Apple Music (nee)
- Windows:
 - Exact Audio Copy / EAC (?)
 - fre:ac!

Wikipedia

Sgt. Pepper's Lonely Hearts Club Band (often referred to simply as ***Sgt. Pepper***) is the eighth studio album by the English rock band the Beatles. Released on 26 May 1967, *Sgt. Pepper* is regarded by musicologists as an early concept album that advanced the roles of sound composition, extended form, psychedelic imagery, record sleeves, and the producer in popular music. The album had an immediate cross-generational impact and was associated with numerous touchstones of the era's youth culture, such as fashion, drugs, mysticism, and a sense of optimism and empowerment. Critics lauded the album for its innovations in songwriting, production and graphic design, for bridging a cultural divide between popular music and high art, and for reflecting the interests of contemporary youth and the counterculture.

MusicBrainz Picard

Changes made by Picard are not reversible.

Picard is a very flexible music tagging tool which can rename your files and overwrite the tags. We strongly recommend that you:

- **read the [User Guide](#) (also available from the Help menu)**
- **test with copies of your music and work in small batches**

Picard is open source software written by volunteers. It is provided as-is and with no warranty.

☒ Show this message again the next time you start Picard.

beets

- CLI only
- kann gut pflügen

Beets is the media library management system for obsessive music geeks.

The purpose of beets is to get your music collection right once and for all. It catalogs your collection, automatically improving its metadata as it goes using the [MusicBrainz](#) database. Then it provides a bouquet of tools for manipulating and accessing your music.

Because beets is designed as a library, it can do almost anything you can imagine for your music collection. Via [plugins](#), beets becomes a panacea:

- Fetch or calculate all the metadata you could possibly need: [album art](#), [lyrics](#), [genres](#), [tempos](#), [ReplayGain](#) levels, or [acoustic fingerprints](#).
- Get metadata from [MusicBrainz](#), [Discogs](#), or [Beatport](#). Or guess metadata using songs' filenames or their acoustic fingerprints.
- [Transcode audio](#) to any format you like.
- Check your library for [duplicate tracks and albums](#) or for [albums that are missing tracks](#).
- Browse your music library graphically through a Web browser and play it in any browser that supports [HTML5 Audio](#).
- ...and [lots more](#).

If beets doesn't do what you want yet, [writing your own plugin](#) is shockingly simple if you know a little Python.

Get Beets

Install with [pip](#) by typing `pip install beets`, then read the [Getting Started](#) guide.

Project

07/05/2025, 22:36:08

Version v2.3.0 of beets has been released! Check

mehr Tagging-Software!

- mp3tag
 - kostet für macOS was, kein Linux-Support, nicht open source :(
- PuddleTag
 - als alternative für mp3tag für Linux gedacht, mächtig, etwas umständlich, offene soße c:
- kid3
 - aus dem KDE-Projekt, mächtig, etwas umständlich, aber natürlich open source :3
- Ear Tag
 - aus dem GNOME-Projekt, mega gutes Interface, unterstützt aber nicht alle Tag Types, natürlich open source :3
